<b>Specificity</b>	<p><b>Mouse anti Human ACTH antibody (Clone 57, BGN/1388/66)</b> recognizes 1-24 ACTH (Synacthen) which, as a synthetic analogue of naturally-occurring Adrenocorticotrophic Hormone, can be used to measure adrenal reserve and for the diagnosis of adrenal insufficiency by acute adrenocortical stimulation.</p> <p>ACTH, released from the anterior pituitary gland in response to corticotropin-releasing hormone from the hypothalamus, acts on the adrenal cortex to stimulate the production of corticosteroids such as cortisol, involved in the response to stress. Administration of 1-24 ACTH increases blood pressure, believed to be attributed to an increase in ACTH-stimulated cortisol secretion, in association with increased cardiac output.</p> <p><b>Mouse anti Human ACTH antibody</b> does not recognize 17-39 ACTH (CLIP). It does cross-reacts with rat N-terminal ACTH.</p>
