**Specificity** **Mouse anti Adenovirus hexon antibody, clone 1431** recognises the penton or hexon group antigen present in most adenovirus serotypes.

Hexon protein is a major coat protein of adenoviruses. Adenoviruses capsids have three principal protein components: the hexon, the penton, and the fiber. Hexon consists of three subunits together forming two major components of different morphological symmetry. A triangular top with three towers of density is superimposed on a more bulky pseudo hexagonal base.
