**Specificity** **Mouse anti diphtheria toxin A antibody, clone 8G2** recognizes diphtheria toxin (DT), secreted by certain strains of *Corynebacterium diphtheriae*. DT catalyzes the ADP-ribosylation of eukaryotic aminoacyl-transferase II (EF-2) using NAD as a substrate. This reaction forms the basis for its toxicity toward eukaryotic organisms. The toxin is secreted as a single polypeptide chain of about 63kDa, it is then processed to form A and B fragments both of which appear to be required for toxicity.

Mouse anti diphtheria toxin A antibody, clone 8G2 recognizes both the free and bound A subunit of diphtheria toxin.

**Storage** This product is shipped at ambient temperature. It is recommended to aliquot and store at -20°C on receipt. When thawed, aliquot the sample as needed. Keep aliquots at 2-8°C for short term use (up to 4 weeks) and store the remaining aliquots at -20°C.

Avoid repeated freezing and thawing as this may denature the antibody. Storage in frost-free freezers is not recommended.
