<b>Specificity</b>	<p><b>Mouse anti <i>Escherichia coli</i> J5 LPS antibody, clone 2D7/1</b> recognizes <i>E. coli</i> J5 LPS.</p> <p>The J5 mutant of <i>E. coli</i> lacks the enzyme uridine diphosphate glucose 4-epimerase and therefore produces an incomplete LPS, deficient in galactose and all the sugars distal to the central polymers. The J5 mutant has no O-specific chains and its endotoxin remains as the core LPS containing lipid A, N acetyl glucosamine, 2-keto-3-deoxyoctonate, heptose and glucose (a composition similar to that of the Rc strains of <i>Salmonella</i>).</p> <p>The clone 2D7/1 has also been found to react with <i>K. pneumoniae</i>, <i>S. sonnei</i> and <i>S. typhimurium</i>.</p>
