**Specificity**

**Mouse anti Respiratory syncytial virus, major surface glycoprotein G antibody, clone 8C5** recognizes the major glycoprotein G of Respiratory Syncytial virus (RSV). RSV is a 100-350 nm enveloped virus belonging to the *Paramyxoviridae*, genus Pneumovirus, that causes minor respiratory infections in adults and bronchitis and bronchopneumonia in children. Its genome consists of single stranded, negative sense RNA that encodes three envelope glycoproteins, a small hydrophobic (SH) protein of unknown function, a major glycoprotein (G) known as the attachment protein, and a fusion (F) protein.
