<b>Specificity</b>	<p><b>Rabbit anti Human Annexin II antibody</b> recognizes human Annexin A2, also known as Annexin II (ANXA2), lipocortin 2, Chromobindin-8 or Placental anticoagulant protein IV. Annexin II is a 339 amino acid secreted protein containing 4 <a href="#">annexin repeats</a>. Annexin II is a pleiotropic calcium-dependent phospholipid-binding protein and member of the annexin family, abundantly expressed in a variety of tissues including the brain, spleen, kidney and placenta, which can exist in a monomer, heterodimer or heterotetramer form.</p> <p>Annexin II acts as an autocrine factor, enhancing the formation of osteoclasts and resorption of bone, and is implicated in both exocytosis and endocytosis. Annexin II is a substrate for both tyrosine and serine/threonine kinases, and is phosphorylated following growth factor stimulation and cellular activation by viral transformation (<a href="#">Brambilla et al. 1991</a>).</p>
