<b>Specificity</b>	<p><b>Rabbit anti p38 alpha MAPK antibody</b> recognizes mitogen-activated protein kinase p38 alpha (p38-alpha MAPK), also known as MAP kinase 14 (MAPK14) and stress activated protein kinase 2a (SAPK2a). p38 alpha is a member of the p38 MAPK serine/threonine kinase protein family, which also includes p38-beta (MAPK11), p38-gamma (MAPK12) and p38-delta (MAPK13) (<a href="#">Cargnello and Roux 2011</a>).</p> <p>p38 alpha MAPK becomes activated in response to a variety of stimuli, which include inflammatory cytokines and oxidative stress (<a href="#">Cargnello and Roux 2011</a>). p38 alpha MAPK plays an essential role in mediating inflammation by regulating the expression of tumor necrosis factor alpha (TNF alpha) and interleukin 1 (IL-1) (<a href="#">Dhillon et al. 2007</a>). p38 MAPK proteins have been implicated in cancer development and p38 alpha MAPK has been proposed to act as a tumor suppressor (<a href="#">Dhillon et al. 2007</a>).</p>
<b>Western Blotting</b>	Rabbit anti p38 alpha MAPK recognizes a band of approximately 38 kDa when run under reducing conditions
