<b>Specificity</b>	<p><b>Rabbit anti EGF R (pTyr1068) antibody</b> recognizes the epidermal growth factor receptor (EGF R), also known as proto-oncogene c-ErbB-1 or receptor tyrosine-protein kinase erbB-1, when phosphorylated at tyrosine 1068. EGF R is a transmembrane glycoprotein and a member of the ErbB receptor tyrosine kinase family. EGF R is a cell surface receptor for members of the epidermal growth factor family.</p> <p>EGF R plays a role in numerous cellular processes such as cell proliferation and apoptosis through the activation of downstream signaling pathways (<a href="#">Scaltriti and Baselga 2006</a>).</p> <p>EFG R is autophosphorylated at tyrosine 1068 upon ligand binding and receptor dimerization.</p>
