Datasheet: AHP3048

Description:	RABBIT ANTI MONO-METHYL-HISTONE H2B (Lys5)
Specificity:	MONO-METHYL-HISTONE H2B (Lys5)
Format:	Purified
Product Type:	Polyclonal Antibody
Isotype:	Polyclonal IgG
Quantity:	0.1 ml

Product Details

Applications

This product has been reported to work in the following applications. This information is derived from testing within our laboratories, peer-reviewed publications or personal communications from the originators. Please refer to references indicated for further information. For general protocol recommendations, please visit www.bio-rad-antibodies.com/protocols.

	Yes	No	Not Determined	Suggested Dilution
Western Blotting	▪			1/500 - 1/1000

Where this product has not been tested for use in a particular technique this does not necessarily exclude its use in such procedures. Suggested working dilutions are given as a guide only. It is recommended that the user titrates the product for use in their own system using appropriate negative/positive controls.

Target Species

Human

Species Cross Reactivity

Based on sequence similarity, is expected to react with:Broad
N.B. Antibody reactivity and working conditions may vary between species. Cross reactivity is derived from testing within our laboratories, peer-reviewed publications or personal communications from the originators. Please refer to references indicated for further information.

Product Form

Purified IgG - liquid

Antiserum Preparation

Antiserum to mono-methyl-histone H2B (Lys5) was raised by repeated immunization of rabbits with highly purified antigen. Purified IgG was prepared from whole serum by affinity chromatography.

Buffer Solution

Phosphate buffered saline

Preservative Stabilisers

0.035% Sodium Azide (NaN_3)
30% Glycerol

Carrier Free

Yes

Immunogen	A synthetic peptide containing mono-methyl lysine 5 of human histone H2B
External Database Links	**UniProt:** Q99879 Related reagents **Entrez Gene:** 8342 HIST1H2BM Related reagents
Synonyms	H2BFE
Specificity	**Rabbit anti Human mono-methyl-histone H2B (Lys5) antibody** recognizes histone H2B when mono-methylated at lysine 5. Histone H2B is one of the four core histones that make up the nucleosome core particle. Nucleosomes are the smallest subunit of chromatin and are made up of 146 bp of DNA wrapped around an octamer comprised of pairs of the four core histones (H2A, H2B, H3, and H4) (Smith, 1991). The presence of post-translational modifications and specialized variants of histone H2B helps the regulation of chromatin structure and function (Molden *et al*. 2015). It has been suggested that changes in methylation of histone H2B may be involved in heat-shock mechanisms. Mono-methylation of lysine 5 is thought to occur at active promoters downstream of the transcription start sight (Wozniak and Strahl, 2014). Wide species cross-reactivity is expected from Rabbit anti Human mono-methyl-histone H2B (Lys5) antibody based on sequence.
Storage	This product is shipped at ambient temperature. It is recommended to aliquot and store at -20°C on receipt. When thawed, aliquot the sample as needed. Keep aliquots at 2-8°C for short term use (up to 4 weeks) and store the remaining aliquots at -20°C. Avoid repeated freezing and thawing as this may denature the antibody. Storage in frost-free freezers is not recommended. Should this product contain a precipitate we recommend microcentrifugation before use.
Guarantee	12 months from date of despatch
Health And Safety Information	Material Safety Datasheet documentation #10049 available at: https://www.bio-rad-antibodies.com/SDS/AHP3048 10049
Regulatory	For research purposes only
