<b>Specificity</b>	<p><b>Rabbit anti Human TNF beta antibody</b> recognizes human tumour necrosis factor beta (TNF-beta), also known as lymphotoxin alpha (LT-alpha), an 18.6 kDa homotrimeric polypeptide secreted by activated T and B lymphocytes, which binds to the TNF receptors TNFR1, TNFR2 and HVEM (herpes virus entry mediator receptor).</p> <p>TNF-beta was originally isolated due to its cytotoxic effects on tumour cells, and has since been identified as a regulator of many cellular processes and a potent mediator of inflammation and immune responses against invading pathogens.</p>
