

## Datasheet: BUF034C BATCH NUMBER 167695

| Description:  | ELISA SYNBLOCK    |
|---------------|-------------------|
| Name:         | ELISA SYNBLOCK    |
| Format:       | Ready To Use      |
| Product Type: | Accessory Reagent |
| Quantity:     | 1000 ml           |

## **Product Details**

| Applications                | This product has been reported to work in the following applications. This information is derived from testing within our laboratories, peer-reviewed publications or personal communications from the originators. Please refer to references indicated for further information. For general protocol recommendations, please visit <u>www.bio-rad-antibodies.com/protocols</u> . |             |             |                          |                     |  |

| Product Information         | <b>ELISA Synblock</b> is an EL<br>with buffers containing ani<br>signals in ELISA assays w   | mal prote   | ins (e.g. B | SA) and reduce non-      | specific background |  |
| Intended Use                | <b>ELISA SynBlock</b> is a novel protein-free blocking buffer suitable for use in all ELISA formats requiring maximum blocking strength. With detergent and synthetic blocking agents, the inert nature of this unique buffer enables maximum reduction of non-specif binding and interference associated particularly with sandwich ELISA assays.                                 |             |             |                          |                     |  |
|                             | Additional molecular stabil<br>environment for coating ar<br>temperature and stored or   | ntigen or o | capture an  | tibody. Plates can be    | •                   |  |

|                      | N.B. SynBlock is not suitable for use on Immunlon <sup>®</sup> 2 plates. Bio-Rad recommends the use of <u>BUF033A</u> for this purpose.  |
|----------------------|--|
| Instructions For Use | 1. Coat ELISA plate with antibody or antigen as required.  |
|                      | 2. After incubation, remove the coating solution and wash the plate x2 with wash buffer. <u>BUF031A</u> can be used for this purpose.  |
|                      | 3. Add 300-400ul of BUF034C and incubate for 2-24 hours. Use a volume equal to or greater than the volume of coating solution.   |
|                      | 4. After removal of the blocking buffer continue with the assay or dry the plate for long-term storage at +4°C.  |
