

## Datasheet: BUF044B

**BATCH NUMBER 160348**

<b>Description:</b>	pNPP
<b>Name:</b>	pNPP
<b>Format:</b>	Ready To Use
<b>Product Type:</b>	Accessory Reagent
<b>Quantity:</b>	500 ml

## Product Details

### Applications

This product has been reported to work in the following applications. This information is derived from testing within our laboratories, peer-reviewed publications or personal communications from the originators. Please refer to references indicated for further information. For general protocol recommendations, please visit [www.bio-rad-antibodies.com/protocols](http://www.bio-rad-antibodies.com/protocols).

	Yes	No	Not Determined	Suggested Dilution
ELISA	▪			Neat

Where this product has not been tested for use in a particular technique this does not necessarily exclude its use in such procedures. Suggested working dilutions are given as a guide only. It is recommended that the user titrates the product for use in their own system using appropriate negative/positive controls.

<b>Product Form</b>	Ready to use - liquid
---------------------	-----------------------

<b>Preservative Stabilisers</b>	None present.
---------------------------------	---------------

<b>Intended Use</b>	BUF044B is a high performance p-nitrophenol phosphate (pNPP) solution, recommended for use in ELISA as a substrate for alkaline phosphatase (AP). In the presence of AP, pNPP is hydrolyzed rapidly to p-nitrophenol and inorganic phosphate to produce a yellow solution.
---------------------	--

This ready to use solution has been carefully formulated to increase pNPP activity and stability. BUF044B may be used for both kinetic and endpoint tests.

<b>Instructions For Use</b>	<ol style="list-style-type: none"> <li>1. Remove the pNPP substrate container from the refrigerator, and allow it to reach room temperature prior to use.</li> <li>2. Add 100ul of BUF044B per microtiter well. Development time is typically 15-30 minutes. Optimum time is determined by the user and will vary according to the procedure and the incubation temperature.</li> </ol>
-----------------------------	---

3. For kinetic tests, measure absorbance at 405nm. For endpoint tests, add 100ul 1.0M sodium hydroxide solution to each well and mix thoroughly prior to measuring absorbance at 405nm /650nm.

---

**Storage**

Store at +4°C. DO NOT FREEZE.

This product is photosensitive and should be protected from light.

Avoid exposure to light and heat

Store aliquots in bottles made of High Density Polyethylene (HDPE).

---

**Guarantee**

Guaranteed until date of expiry. Please see product label.

---
