

Datasheet: BUF049C

BATCH NUMBER 150786

Description:	HISPEC ASSAY DILUENT
Name:	HISPEC ASSAY DILUENT
Format:	Ready To Use
Product Type:	Accessory Reagent
Clone:	N/A
Quantity:	500 ml

Product Details

Applications

This product has been reported to work in the following applications. This information is derived from testing within our laboratories, peer-reviewed publications or personal communications from the originators. Please refer to references indicated for further information. For general protocol recommendations, please visit www.bio-rad-antibodies.com/protocols.

	Yes	No	Not Determined	Suggested Dilution
ELISA	▪			
Immunoassay	▪			

Where this product has not been tested for use in a particular technique this does not necessarily exclude its use in such procedures. Suggested working dilutions are given as a guide only. It is recommended that the user titrates the product for use in their own system using appropriate negative/positive controls.

Product Form	Ready to use assay diluent buffer
Preservative Stabilisers	0.1% Proclin™ 300

Intended Use	<p>HISPEC assay diluent works to reduce cross reactivity, non-specific binding and matrix effects in immunoassays such as ELISA, EIA, Western blotting, immuno-PCR, protein arrays, multianalyte immunoassays and immunohistochemistry.</p> <p>The effect of HISPEC assay diluent is dependent on assay system and the antibodies used. HISPEC assay diluent is used instead of a sample buffer or antibody dilution buffer within the immunoassay protocol.</p> <p>HISPEC assay diluent is unsuitable for blocking of surfaces. For blocking of surfaces we recommend one of the blocking solutions within the Bio-Rad range – see “Useful reagents” below.</p>
---------------------	--

Examples of use:

ELISA: use as a dilution buffer for the specimen and for the detection antibodies

Western blotting: use as dilution buffer for primary and secondary antibodies

Immunohistochemistry: use as dilution buffer for primary and secondary antibodies

Protein arrays: use as dilution buffer for specimen and for the detection antibodies

Instructions For Use	<p>The buffer should be mixed thoroughly immediately before use.</p> <p>Dilution of the samples:</p> <p>The standards and samples for ELISA and protein arrays can be diluted with HISPEC assay diluent at 1:2 or higher. Standards and samples should be treated identically.</p> <p>Dilution of antibodies:</p> <p>Antibodies can be diluted with HISPEC assay diluent in a user-defined manner, depending on the recommendation of the antibody supplier.</p> <p>Expected results:</p> <p>In some cases a reduction in assay signal intensity may be observed when using HISPEC assay diluent. This does not result in a reduction in assay sensitivity due to the accompanying reduction in non-specific binding.</p> <p>Signal intensity may be increased in some assay systems by use of higher concentrations of antibodies, or by dilution of the HISPEC assay diluent in distilled water (1:2) prior to use. However, these adjustments may also result in some associated increase in non-specific binding.</p>

Storage	<p>Store at +4°C or at -20°C if preferred.</p> <p>Storage in frost-free freezers is not recommended.</p> <p>This product should be stored undiluted. Avoid repeated freezing and thawing.</p>
Guarantee	<p>Guaranteed until date of expiry. Please see product label.</p>
