

# Datasheet: FCSC827B BATCH NUMBER 157673

Description:	QUANTUM™ R-PE MESF MEDIUM LEVEL
Name:	QUANTUM™ R-PE MESF MEDIUM LEVEL
Format:	Flow Cytometry Calibration Reagent
Product Type:	Accessory Reagent
Quantity:	100 TESTS

## **Product Details**

Applications	This product has been reported to work in the following applications. This information is derived from testing within our laboratories, peer-reviewed publications or personal communications from the originators. Please refer to references indicated for further information. For general protocol recommendations, please visit www.bio-rad-antibodies.com/protocols.   Yes No Not Determined Suggested Dilution   Flow Cytometry •   Where this product has not been tested for use in a particular technique this does not necessarily exclude its use in such procedures. Suggested working dilutions are given as a guide only. It is recommended that the user titrates the product for use in their own system using appropriate negative/positive controls.						
Buffer Solution	Phosphate buffered salin	_	- <b>I</b>				
Preservative Stabilisers	0.09% Sodium Azide (Na 0.01% Gelatin 0.01% Tween 80	aN <sub>3</sub> )					
Product Information	Quantum <sup>™</sup> R-PE MESF Medium Level is comprised of four calibrated fluorescent populations, with different levels of RPE fluorescence intensity, and one blank population of uniform microspheres that are approximately the size of human lymphocytes (7-9µm). The excitation and emission spectra of the microspheres match those of cell samples labeled with RPE.						
	The levels of fluorescend intended to span the inte used for many types of a Common analyses includ	nsity rang nalyses, a	e of comi and nicely	mon cellular analyses. span the range of typ	Medium level kits are ical cell samples.		
Intended Use	FCSC827B is used in the quantitation of RPE fluorescence intensity in Molecules of Equivalent Soluble Fluorochrome (MESF) units. When used in conjunction with Simply Cellular® microspheres this kit also allows quantitation of Antibody Binding Capacity						

(ABC).

	This kit enables fluorescence intensity of a sample to be directly quantified in terms of MESF units and for samples from different instruments to be accurately compared. The fluorescence intensity of each of the five populations in the kit have been calibrated against solutions of laser grade fluorescent dye in units of MESF RPE per microsphere. The Certified Blank <sup>™</sup> population is used to measure the fluorescence detection threshold of the instrument. Correct use of the kit enables: 1) quantitation of fluorescence intensity of samples in terms of MESF; 2) determination of instrument fluorescence detection threshold; 3) determination of instrument linearity; 4) data comparison over time and between multiple instruments.
Reagents In The Kit	1 x 5ml bottle of unlabeled microbeads 4 x 5ml bottles of labeled microbeads
Instructions For Use	Instructions for use can be found at <u>www.bio-rad-antibodies.com/uploads</u> /IFU/FCSC827B.pdf
Storage	Store at +4°C. DO NOT FREEZE. This product should be stored undiluted. This product is photosensitive and should be protected from light.
Guarantee	Guaranteed until date of expiry. Please see product label.
Acknowledgements	Quantum™ is a trademark of Bangs Laboratories, INC.
Health And Safety Information	Material Safety Datasheet documentation #10042 available at: https://www.bio-rad-antibodies.com/SDS/FCSC827B 10042
Regulatory	For research purposes only
