<b>Synonyms</b>	GAPD
<b>Specificity</b>	<p><b>Human anti GAPDH antibody, clone AbD22549_hlgG1</b> recognizes human glyceraldehyde 3-phosphate dehydrogenase (GAPDH), a 335 amino acid multifunctional protein. The main function of GAPDH is to catalyse the reversible oxidative phosphorylation of glyceraldehyde-3-phosphate, in conjunction with inorganic phosphate and nicotinamide adenine dinucleotide (NAD). It is a major glycolytic enzyme within the cytosol and is also involved in a number of intracellular processes, including membrane fusion, microtubule bundling, phosphotransferase, DNA replication and DNA repair. It has also been shown to translocate to the nucleus under a variety of stressors, most of which are associated with oxidative stress, whereby it mediates cell death.</p> <p>GAPDH has been shown to bind to several proteins that are responsible for neurodegenerative diseases, such as amyloid precursor protein and huntingtin (<a href="#">Burke et al. 1996</a>).</p> <p>Since GAPDH is constitutively expressed in almost all tissues at high levels, this antibody is recommended for use as a loading control for western blotting.</p>
<b>Affinity</b>	The monovalent intrinsic affinity of AbD22549 was measured as $K_D = 2$ nM by real time, label free molecular interaction analysis on immobilized HSPA4
<b>Western Blotting</b>	Anti GAPDH antibody detects a band of approximately 36 kDa in Jurkat cell lysate under reducing conditions
