

# Datasheet: ICT943 BATCH NUMBER 163172

MITOCHONDRIAL PERMEABILITY TRANSITION KIT
MITOCHONDRIAL PERMEABILITY TRANSITION: MitoPT JC-1 KIT
JC-1 Dye (Dual Green/Red Fluorescence)
Kits
100 TESTS

#### **Product Details**

#### **Applications**

This product has been reported to work in the following applications. This information is derived from testing within our laboratories, peer-reviewed publications or personal communications from the originators. Please refer to references indicated for further information. For general protocol recommendations, please visit <a href="www.bio-rad-antibodies.com/protocols">www.bio-rad-antibodies.com/protocols</a>.

	Yes	No	Not Determined	Suggested Dilution
Flow Cytometry	•			
Immunofluorescence	•			

Where this product has not been tested for use in a particular technique this does not necessarily exclude its use in such procedures. Suggested working dilutions are given as a guide only. It is recommended that the user titrates the product for use in their own system using appropriate negative/positive controls.

#### **Product Information**

**The MitoPT JC-1 kit** uses a quick and easy staining method to clearly differentiate between non-apoptotic and apoptotic cells through mitochondrial functionality.

#### **Test Principle**

An early indication of apoptosis involves a collapse in the electrochemical gradient across the mitochondrial membrane. Loss of mitochondrial membrane potential can be detected by a unique fluorescent cationic dye known as JC-1 (5,5',6,6'-tetrachloro-1,1',3,3'-tetraethylbenzamidazolocarbocyanin iodide) that has been incorporated into the MitoPT JC-1 kit.

The MitoPT JC-1 reagent easily penetrates cells and enters the mitochondria. It aggregates in the mitochondria of non-apoptotic cells and fluoresces red, whilst in apoptotic cells it diffuses throughout the cell. Once dispersed, the reagent assumes a monomeric form and fluoresces green. This allows an easy distinction between non-apoptotic red fluorescent cells and apoptotic green fluorescent cells which can be read with a flow cytometer, fluorescence microscope or a fluorescence plate reader using black microtitre plates.

#### Reagents In The Kit

MitoPT JC-1 Reagent, 100 tests 10x Assay Buffer, 60 mL

Instructions For Use	Instructions for use can be found at www.bio-rad-antibodies.com/uploads/IFU/ICT943.pdf

Storage	Store the unopened kit and each unopened component at -20°C until the expiration date.
	Once opened, some components may be stored at 2-8°C until the expiration date. CCCP
	should be stored frozen. Once reconstituted with DMSO, dilute and use MitoPT reagent
	immediately, or store at ≤-20°C for 12 months protected from light and thawed no more
	than twice.
Guarantee	Guaranteed until date of expiry. Please see product label.
