

Datasheet: LNK022RPE BATCH NUMBER 159036

Description: Name: Format: Product Type: Quantity:	RPE CONJU Kit		DY CONJ	IUGATION KIT					
Format: Product Type:	Kit			LYNX RAPID RPE ANTIBODY CONJUGATION KIT					
Product Type:		RPE CONJUGATION KIT Kit							
Quantity:	Conjugation	Conjugation Kit 3 CONJUGATIONS for 60µg antibody							
	3 CONJUGA								
Product Details									
Applications	This product has be	en reported to	work in th	ne following applicatio	ns. This information is				
	derived from testing within our laboratories, peer-reviewed publications or personal communications from the originators. Please refer to references indicated for further information. For general protocol recommendations, please visit <u>www.bio-rad-antibodies.com/protocols</u> .								
	Conjugation	Yes	No	Not Determined	Suggested Dilution				
	protein. Activation of proprietary reagents within the antibody-label solution results in directional covalent bonding of RPE to the antibody. The LYNX Rapid Conjugation kit® can be used to label small quantities of antibody/protein at near neutral pH, allowing a high conjugation efficiency with 100%								
		near neutral pr	l, allowing	g a high conjugation e					
Reagents In The Kit	antibody recovery.	NX lyophilized er reagent		g a high conjugation e

Preparing The	antibody recovery. 3 Vials of 100ug LY 1 Vial LYNX Modifie 1 Vial LYNX Quenc The following buffer 10-50mM amine-fre	NX lyophilized er reagent her reagent solutions are r e buffer (e.g H	RPE mix recommen	nded for preparing the	fficiency with 100% antibody: hate) pH range 6.5-8.5,				

	chemicals . Azide (0.02-0.1%), EDTA, up to 50% Glycerol and common non-buffering salts and sugars have little or no effect on conjugation efficiency.
	Due to the large size of RPE (240kDa), it is recommended that 50-60ug of antibody be used for every 100ug RPE, to ensure a slight RPE molar excess. For optimal results the antibody should be at a concentration of 1mg/ml, with a maximum volume of 60ul and a maximum antibody amount of 60ug. Antibody at a concentration of greater than 1mg/ml requires dilution. Antibody below 1mg/ml can still be used as long as the maximum volume is not exceeded. Using less than the recommended amount of antibody may result in unbound label, but this will be removed during subsequent application wash steps. Antibody below 0.5mg/ml should be concentrated before use with the kit.
Instructions For Use	 To the antibody sample add 1ul of the Modifier reagent for every 10ul of antibody and mix gently. Pipette the mixed antibody-modifier sample directly onto the LYNX lyophilized mix and gently pipette up and down twice to resuspend. Replace cap onto vial and incubate in the dark at room temperature (20-25°C) for 3 hours, or overnight if preferred. After incubation, add 1ul of Quencher reagent for every 10ul of antibody used. Leave to stand for 30 minutes before use.
