

Datasheet: LNK023RPE BATCH NUMBER 168518

Description:	LYNX RAPID RPE	Ξ ΑΝΤΙΒΟ	DY CON.	JUGATION KIT		
Name:	RPE CONJUGATI	ON KIT				
Format:	Kit					
Product Type:	Conjugation Kit					
Quantity:	1 CONJUGATION	l for 600µç	g antibody	y		
Product Details						
Applications	This product has been re	ported to	work in th	he following applicatio	ns. This information is	
	derived from testing within our laboratories, peer-reviewed publications or personal communications from the originators. Please refer to references indicated for further information. For general protocol recommendations, please visit <u>www.bio-rad-antibodies.com/protocols</u> .					
	Conjugation	Yes	No	Not Determined	Suggested Dilution	
	protein. Activation of proprietary reagents within the antibody-label solution results in directional covalent bonding of RPE to the antibody. The LYNX Rapid Conjugation kit® can be used to label small quantities of antibody/protein at near neutral pH, allowing a high conjugation efficiency with 100%					
Reagents In The Kit	antibody recovery. 1 Vial of 1mg LYNX lyophilized RPE mix 1 Vial LYNX Modifier reagent 1 Vial LYNX Quencher reagent					
Preparing The Antibody	The following buffer solutions are recommended for preparing the antibody:					
	10-50mM amine-free buffer (e.g HEPES, MES, MOPS and phosphate) pH range 6.5-8.5, although moderate concentrations of Tris buffer (<20mM) may be tolerated.					
	lf possible, avoid buffe					

	chemicals . Azide (0.02-0.1%), EDTA, up to 50% Glycerol and common non-buffering salts and sugars have little or no effect on conjugation efficiency.
	Due to the large size of RPE (240kDa), it is recommended that 50-60ug of antibody be used for every 100ug RPE, to ensure a slight RPE molar excess. For optimal results the antibody should be at a concentration of 1mg/ml, with a maximum volume of 600ul and a maximum antibody amount of 600ug. Antibody at a concentration of greater than 1mg/ml requires dilution. Antibody below 1mg/ml can still be used as long as the maximum volume is not exceeded. Using less than the recommended amount of antibody may result in unbound label, but this will be removed during subsequent application wash steps. Antibody below 0.5mg/ml should be concentrated before use with the kit.
Instructions For Use	1. To the antibody sample add 1ul of the Modifier reagent for every 10ul of antibody and mix gently.
	2. Pipette the mixed antibody-modifier sample directly onto the LYNX lyophilized mix and gently pipette up and down twice to resuspend.
	3. Replace cap onto vial and incubate in the dark at room temperature (20-25 ^o C) for 3 hours, or overnight if preferred.
	4. After incubation, add 1ul of Quencher reagent for every 10ul of antibody used. Leave to stand for 30 minutes before use.
