

## Datasheet: LNK263B BATCH NUMBER 168376

Description:	· · · · ·					ATION KIT
Name:						
Format:	Kit					
Product Type:	Conjugation Kit					
Quantity:	1 CONJUGATION	I for 2mg a	antibody			
roduct Details						
Applications	This product has been reported to work in the following applications. This information is derived from testing within our laboratories, peer-reviewed publications or personal communications from the originators. Please refer to references indicated for further information. For general protocol recommendations, please visit <u>www.bio-</u> rad-antibodies.com/protocols.

	Do not use buffers containing nucleophilic components (e.g primary amines), thiols (e.g. Thiomersal/Thimerosal), Merthiolate, Glycine or Proclin. These substances may react with LYNX chemicals. Azide (0.02-0.1%), EDTA and common non-buffering salts and sugars have little or no effect on conjugation efficiency.
	It is recommended that up to 2mg antibody be used in each labeling reaction. For optimal results the antibody volume should be 400-1000µl, at a concentration range between 1mg/ml and 2.5 mg/ml.
Instructions For Use	<ol> <li>Before you add antibody to the Lynx Rapid Plus mix, add 1 µl of Rapid Modifier reagent for each 10 µl of antibody to be labelled. Mix gently.</li> <li>Remove the screw cap from the vial of Lynx Rapid Plus mix and pipette the antibody sample (with the added Rapid Modifier) directly onto the lyophilised material. Resuspend gently by withdrawing and re-dispensing the liquid once or twice using a pipette.</li> <li>Replace cap on the vial and leave standing for 15 minutes at room temperature (20-25 <sup>0</sup>C). Longer incubation times could have negative effects on the conjugate.</li> <li>After 15 minutes incubation, add 1 µl of Lynx Rapid Plus Quencher reagent for every 10 µl of antibody used. The conjugate can be used after 4 minutes. The conjugates do not require purification.</li> </ol>

Storage	This kit contains lyophilized hygroscopic components that are moisture-sensitive. This kit is shipped under ambient conditions with silica packets to avoid exposure to moisture. On receipt, Bio-Rad recommend that the kit is stored at -20°C and protected from moisture. Storage in frost-free freezers is not recommended. This product should be stored undiluted. Avoid repeated freezing and thawing. Before opening, allow the components to reach room temperature to minimize condensation.
Guarantee	12 months from date of despatch

Licensed Use	Bio-Rad LYNX Rapid Plus Conjugation kits are offered for research purposes alone, and are not intended for human, therapeutic or diagnostic use. The purchase of this conjugation kit conveys to the buyer (whether the buyer is a not-for-profit, academic or for-profit entity) the non-transferable right to use the amount of product purchased and the components of the product for in-house research. The buyer shall not sell or otherwise transfer this product, its components, or materials prepared therefrom to any third party.

The buyer shall not use this product or its components for commercial purposes. For the avoidance of doubt, ?commercial purposes? means any activity by a party for consideration and includes, without limitation, use of the product or its components (I) in the manufacturing of conjugated materials (e.g. labeled antibodies), (ii) to provide a service, information or data, (iii) for therapeutic, diagnostic or prophylactic purposes, or (iv) for repackaging/resale, whether or not such product or its components are resold for use in research. The use of this product by the buyer constitutes agreement with the terms of this limited use label license for LYNX products.
