

Datasheet: MCA1266SBV570

Description:	MOUSE ANTI MOUSE CD161 / NK1.1:StarBright Violet 570
Specificity:	CD161 / NK1.1
Format:	StarBright Violet 570
Product Type:	Monoclonal Antibody
Clone:	PK136
Isotype:	IgG2a
Quantity:	100 TESTS/0.5ml

Product Details

Applications

This product has been reported to work in the following applications. This information is derived from testing within our laboratories, peer-reviewed publications or personal communications from the originators. Please refer to references indicated for further information. For general protocol recommendations, please visit www.bio-rad-antibodies.com/protocols.

	Yes	No	Not Determined	Suggested Dilution
Flow Cytometry				Neat

Where this product has not been tested for use in a particular technique this does not necessarily exclude its use in such procedures. Suggested working dilutions are given as a guide only. It is recommended that the user titrates the product for use in their own system using appropriate negative/positive controls.

Target Species	Mouse					
Species Cross Reactivity	Does not react with:R	Does not react with:Rat, Human				
Product Form	Purified IgG conjugate	ed to StarBright Violet	570 - liquid			
Max Ex/Em	Fluorophore	Excitation Max (nm)	Emission Max (nm)			
	StarBright Violet 570	404	571			
Preparation	Purified IgG prepared supernatant	by affinity chromatog	raphy on Protein A from tissue cul			
Buffer Solution	Phosphate buffered s	aline				
Preservative	0.09% Sodium Azide	(NaN ₃)				
Stabilisers	1% Bovine Serum Alb	oumin				
	0.1% Pluronic F68					
	0.1% PEG 3350					

Approx.	Protein
Concent	rations

Fusion Partners

Spleen cells from immunized (C3H x BALB/c) FI Hybrid were fused with cells of the Sp2/0 - Ag14 myeloma cell line.

Specificity

Mouse anti Mouse CD161 / NK1.1 antibody, clone PK136 recognizes the mouse NK1.1 cell surface antigen, a cell surface glycoprotein encoded by members of the NKR-P1 gene family. The NK1.1 surface antigen is also known as CD161b/CD161c and Ly-55.

In the mouse the NKR-P1 family has three members, NKR-P1A, -B and -C, whilst in the human only one member has been identified. The human protein has received the designation CD161, and the mouse proteins have been referred to as CD161a, -b, -c etc.

Although previously thought to recognize only CD161c, recent data has shown that the PK136 antibody may also react with CD161b. CD161c expression itself is strain specific in mice, but recognition of CD161b by PK136 appears to be even more complex, as only some CD161b positive strains are labelled by the antibody. Engagement of CD161c has been reported to have activating function in NK cells, whilst engagement of CD161b is inhibitory.

Mouse anti Mouse NK1.1 Antigen antibody, clone PK136 is useful for the identification of NK cells in selected strains of mice (positive on C57BL, FVB/N and NZB, but negative on AKR and BALB/c) and is also expressed by rare subsets of T cells and monocytes. Mouse anti Mouse NK1.1 antibody, clone PK136 has also been used for *in vivo* depletion of NK cells (Wang et al. 2022) and *in vitro* activation of NK cells (Kung and Miller 1995).

Flow Cytometry

Use 5µl of the suggested working dilution to label 10⁶ cells in 100µl. Best practices suggest a 5 minutes centrifugation at 6,000g prior to sample application.
