

# Datasheet: MCA1799 BATCH NUMBER 157777

Description:	MOUSE ANTI HUMAN ESTROGEN RECEPTOR ALPHA		
Specificity:	ESTROGEN RECEPTOR ALPHA		
Format:	S/N		
Product Type:	Monoclonal Antibody		
Clone:	6F11		
lsotype:	lgG1		
Quantity:	1 ml		

# **Product Details**

Applications	This product has been reported to work in the following applications. This information is derived from testing within our laboratories, peer-reviewed publications or personal communications from the originators. Please refer to references indicated for further information. For general protocol recommendations, please visit <u>www.bio-</u> rad-antibodies.com/protocols.				
		Yes	No	Not Determined	Suggested Dilution
	Flow Cytometry			•	
	Immunohistology - Frozen (1)	-			1/40 - 1/60
	Immunohistology - Paraffin (2)	-			1/40 - 1/80
	ELISA				
	Immunoprecipitation			•	
	Western Blotting	-			1/50 - 1/100
	necessarily exclude its use in such procedures. Suggested working dilutions are given as a guide only. It is recommended that the user titrates the antibody for use in their own system using appropriate negative/positive controls. (1)The use of Zamboni's fixative is recommended for best results (2)This product requires antigen retrieval using heat treatment prior to staining of paraffin sections.Sodium citrate buffer pH 6.0 is recommended for this purpose.				
Target Species	Human				
Product Form	Tissue Culture Supernatant - liquid				
Preservative Stabilisers	0.09% Sodium Azide				
Immunogen	Recombinant human estrogen receptor (alpha form).

Synonyms	ESR, NR3A1			
RRID	AB_2102070			
Fusion Partners	Spleen cells from immunised mice were fused with cells of the mouse p3-NS1-Ag4-1 myeloma cell line.			
Specificity	<b>Mouse anti Human estrogen alpha antibody, clone 6F11</b> recognizes the human estrogen receptor alpha chain (ER $\alpha$ ), also known as the estradiol receptor or nuclear receptor subfamily 3 group A member 1. ER $\alpha$ is a ~65 kDa steroid hormone receptor containing an N-terminal (AF-1) ligand independent transactivation domain, a DNA binding domain and a C-terminal ligand binding domain which overlaps with an (AF-2) domain. ER $\alpha$ binds to DNA as a homodimer (Klinge 2001) and can also form heterodimers with Estrogen receptor beta.			
	The detection of estrogen (ER) and progesterone (PR) receptors using immunohistochemical staining of formalin fixed, paraffin embedded (FFPE) tissue, has gradually replaced ligand binding assays, to become the most common method for the determination of the ER/PR status of breast tumors ( <u>Yaziji <i>et al.</i> 2008</u> ). Approximately 75% to 80% of breast tumors have estrogen and/or progesterone receptors, and the presence of these receptors helps determine both the patients prognosis and the effectiveness of hormonal therapy ( <u>Bhargava <i>et al.</i> 2012</u> ).			
	Mouse anti human estrogen alpha antibody, clone 6F11 has been used successfully for identification of ER $\alpha$ on breast cancer cell lysates using Western blotting and for the immunohistochemical detection of ER $\alpha$ in breast cancer tissues ( <u>Ambroise <i>et al.</i> 2011</u> ).

Storage	Store at +4°C or at -20°C if preferred.
	Storage in frost-free freezers is not recommended.
	This product should be stored undiluted. Avoid repeated freezing and thawing as this may denature the antibody. Should this product contain a precipitate we recommend
	microcentrifugation before use.
Guarantee	Guaranteed until date of expiry. Please see product label.
