

Datasheet: MCA2127SBUV445 BATCH NUMBER 100006486

Description:	MOUSE ANTI HUMAN CD25:StarBright UltraViolet 445		
Specificity:	CD25		
Other names:	IL-2R ALPHA CHAIN		
Format:	StarBright UltraViolet 445		
Product Type:	Monoclonal Antibody		
Clone:	MEM-181		
Isotype:	lgG1		
Quantity:	100 TESTS/0.5ml		

Product Details

Applications	This product has been reported to work in the following applications. This information is derived from testing within our laboratories, peer-reviewed publications or personal communications from the originators. Please refer to references indicated for further information. For general protocol recommendations, please visit <u>www.bio-rad-antibodies.com/protocols</u> .					
		Yes No	Not Determined	Suggested Dilution		
	Flow Cytometry	•		Neat		
	necessarily exclude its	s use in such procedu mmended that the us	er titrates the product for	g dilutions are given as		
Target Species	Human					
Product Form	Purified IgG conjugated to StarBright UltraViolet 445 - liquid					
Max Ex/Em	Fluorophore	Excitation Max (nm)	Emission Max (nm)			
	StarBright UltraViolet 445	347	440			
Preparation	Purified IgG prepared by affinity chromatography on Protein A					
Buffer Solution	Phosphate buffered saline					
Preservative Stabilisers	0.09% Sodium Azide (1% Bovine Serum Alb 0.1% Pluronic F68 0.1% PEG 3350					

	0.05% Tween 20
Immunogen	Human PHA blasts; day 3 of culture.
External Database Links	UniProt: <u>P01589</u> <u>Related reagents</u> Entrez Gene: <u>3559</u> IL2RA <u>Related reagents</u>
Fusion Partners	Spleen cells from immunised BALB/c mice were fused with cells of the mouse P3.X63 Ag8.653 myeloma cell line.
Specificity	Mouse anti Human CD25, clone MEM-181 recognizes the ~55 kDa alpha subunit of the human IL-2 receptor, also known as p55 or TAC antigen, CD25 is a type 1 transmembrane protein with <u>two Sushi domains</u> , also known as short concensus repeats (SCRs) or complement control protein (CCP) modules (<u>Norman <i>et al.</i> 1991</u>) located within its extracellular domain.
	The IL-2 receptor exists in three forms. A high affinity form consisting of a non-covalently linked heterodimer composed of the alpha subunit (CD25) and the IL-2 receptor beta subunit also known as CD122 or p75, a medium affinity beta subunit (CD122) monomer or a low affinity alpha (CD25) subunit monomer.
	CD25 is expressed by activated T lymphocytes and activated B lymphocytes responding to antigen or mitogen stimulation. CD25 is also expressed in some thymocytes and oligodendrocytes. In disease, elevated expression of CD25 in noted in a number of chronic inflammatory conditions, tuberculoid leprosy patients demonstrate markedly elevated levels of circulating CD25high FoxP3+ regulatory T cells (T-regs) (<u>Attia <i>et al.</i></u> 2010).
	Elevated levels of CD25 antigen expression are often seen in cases of <u>non-Hodgkin 's</u> l <u>ymphoma</u> and diffuse large B cell lymphoma (<u>Fujiwara <i>et al</i>.2013</u>).
Flow Cytometry	Use 5ul of the suggested working dilution to label 10 ⁶ cells in 100ul. Best practices suggest a 5 minutes centrifugation at 6,000g prior to sample application.
