

# Datasheet: MCA2127SBUV575

Description:	MOUSE ANTI HUMAN CD25:StarBright UltraViolet 575			
Specificity:	CD25			
Other names:	IL-2R ALPHA CHAIN			
Format:	StarBright UltraViolet 575			
Product Type:	Monoclonal Antibody			
Clone:	MEM-181			
lsotype:	lgG1			
Quantity:	100 TESTS/0.5ml			

## **Product Details**

Applications	This product has been reported to work in the following applications. This info derived from testing within our laboratories, peer-reviewed publications or per- communications from the originators. Please refer to references indicated for information. For general protocol recommendations, please visit <u>www.bio- rad-antibodies.com/protocols</u> .				
			No	Not Determined	Suggested Dilution
	Flow Cytometry	•			Neat
	Where this product ha necessarily exclude its a guide only. It is recon system using appropria	s use in such pr mmended that t	ocedur he use	es. Suggested workir titrates the product	ng dilutions are given as
Target Species	Human				
Product Form	Purified IgG conjugated to StarBright UltraViolet 575 - liquid				
Max Ex/Em	Fluorophore	Excitation Max	(nm)	Emission Max (nm)	
	StarBright UltraViolet 575	340		569	
Preparation	Purified IgG prepared supernatant	by affinity chror	natogra	aphy on Protein A fro	m tissue culture
Buffer Solution	Phosphate buffered saline				
Preservative Stabilisers	0.09% sodium azide ( <b>i</b> 1% bovine serum albu 0.1% Pluronic F68 0.1% PEG 3350	0,			

	0.05% Tween 20
Immunogen	Human PHA blasts; day 3 of culture.
External Database Links	UniProt: <u>P01589</u> <u>Related reagents</u> Entrez Gene: <u>3559</u> IL2RA <u>Related reagents</u>
Fusion Partners	Spleen cells from immunised BALB/c mice were fused with cells of the mouse P3.X63 Ag8.653 myeloma cell line.
Specificity	<b>Mouse anti Human CD25, clone MEM-181</b> recognizes the ~55 kDa alpha subunit of the human IL-2 receptor, also known as p55 or TAC antigen, CD25 is a type 1 transmembrane protein with <u>two Sushi domains</u> , also known as short concensus repeats (SCRs) or complement control protein (CCP) modules ( <u>Norman <i>et al.</i> 1991</u> ) located within its extracellular domain.
	The IL-2 receptor exists in three forms. A high affinity form consisting of a non-covalently linked heterodimer composed of the alpha subunit (CD25) and the IL-2 receptor beta subunit also known as CD122 or p75, a medium affinity beta subunit (CD122) monomer or a low affinity alpha (CD25) subunit monomer.
	CD25 is expressed by activated T lymphocytes and activated B lymphocytes responding to antigen or mitogen stimulation. CD25 is also expressed in some thymocytes and oligodendrocytes. In disease, elevated expression of CD25 in noted in a number of chronic inflammatory conditions, tuberculoid leprosy patients demonstrate markedly elevated levels of circulating CD25high FoxP3+ regulatory T cells (T-regs) ( <u>Attia <i>et al.</i></u> 2010).
	Elevated levels of CD25 antigen expression are often seen in cases of <u>non-Hodgkin 's</u> <u>lymphoma</u> and diffuse large B cell lymphoma ( <u>Fujiwara <i>et al</i>.2013</u> ).
Flow Cytometry	Use 5µl of the suggested working dilution to label 10 <sup>6</sup> cells in 100µl. Best practices suggest a 5 minutes centrifugation at 6,000g prior to sample application.
