

Datasheet: MCA2550 BATCH NUMBER 147081

Description:	MOUSE ANTI FELINE LEUKAEMIA VIRUS p15E
Specificity:	FELINE LEUKAEMIA VIRUS p15E
Format:	Purified
Product Type:	Monoclonal Antibody
Clone:	PF6J-2A1
Isotype:	lgG2a
Quantity:	0.25 mg

Product Details

Applications	This product has been re derived from testing withi communications from the information. For general	tions or personal dicated for further					
	rad-antibodies.com/proto	<u>otocols</u> .					
		Yes	No	Not Determined	Suggested Dilution		
	Flow Cytometry			•			
	Immunohistology - Frozen			•			
	Immunohistology - Paraffin	-					
	ELISA			•			
	Immunoprecipitation	•					
	Western Blotting	-			1/2,000		
	Where this product has not been tested for use in a particular technique this does not						
	necessarily exclude its us a guide only. It is recomn system using appropriate	nended th	nat the us	er titrates the product f	•		
Target Species	Viral						
Product Form	Purified IgG - liquid						
Preparation	Purified IgG prepared by affinity chromatography on Protein A from tissue culture supernatant						
Buffer Solution	Phosphate buffered saline						
Preservative Stabilisers	0.05% Sodium Azide (Na						
Approx. Protein	IgG concentration 1.0mg/ml						

Concentrations

Extension UniProt: Q85525 Related reagents RRID AB_619995 Specificity Mouse anti Feline loukemia virus p15e antibody, clone PF6J-2A1 recognizes an epitope within the amino-terminal domain of both the 20 kDa full-length (including intracellular sequence), and the 15k Da truncated forms, of feline leukaemia virus (FeLV) p15e transmembrane envelope protein. Persistent infection of cats with the oncorretrovirus FeLV can result in the non-neoplastic condition known as FeLV-associated enteritis (FAE). Studies have shown strong expression of the major FeLV proteins p15e and gp70 in intestinal crypt epithelial cells of cats with FAE, compared to FeLV-positive cats without intestinal alterations, thereby suggesting a pathogenic role for these envelope proteins/precursors in FAE. Western Blottling MCA2550 detects band/s of approximately 15kDa and 20kDa enteritis. Vet Pathol. 37 (2): 129-36. 2. Kipar, A. <i>et al.</i> (2000) Expression of viral proteins in feline leukemia virus- associated enteritis and other relevant forms of feline enteritis. Vet Pathol. 38 (4): 359-71, 3. Burns, C. C. <i>et al.</i> (2000) Fibu leukemia virus orystein cats with feline leukemia virus- associated enteritis and other relevant forms of feline enteritis. Vet Pathol. 38 (4): 359-71, 3. Burns, C. C. <i>et al.</i> (2000) Fibu leukemia virus explained bor of the transmembrane protein of an attenuated immunodeficiency-inducing feline leukemia virus variant inhibit envelope protein processing. J Virol. 69 (4): 2126-32. Storage Storage in trost-free freezers is not recommended. This product should be stored undified. Avoid repeated freezing and thawing as this may denature the antibody. Should this product contain a precipitate we recommend mic							
Specificity Mouse ant Feline leukemia virus p15e antibody, clone PF6J-2A1 recognizes an epitope within the amino-terminal domain of both the 20 kDa full-length (including intracellular sequence), and the 15k Da truncated forms, of feline leukaemia virus (FeLV) p15e transmembrane envelope protein. Persistent infection of cats with the oncoretrovirus FeLV can result in the non-neoplastic condition known as FeLV-associated enteritis (FAE). Studies have shown strong expression of the major FeLV proteins p15e and gp70 in intestinal crypt epithelial cells of cats with FAE, compared to FeLV-positive cats without intestinal atterations, thereby suggesting a pathogenic role for these envelope proteins/precursors in FAE. Western Blotting MCA2550 detects band/s of approximately 15kDa and 20kDa under reducing conditions. References 1.
