

Datasheet: MCA2558PE

Description:	MOUSE ANTI DOG CD107b:RPE
Specificity:	CD107b
Other names:	LAMP-2
Format:	RPE
Product Type:	Monoclonal Antibody
Clone:	AC17
Isotype:	lgG1
Quantity:	100 TESTS

Product Details

Applications

This product has been reported to work in the following applications. This information is derived from testing within our laboratories, peer-reviewed publications or personal communications from the originators. Please refer to references indicated for further information. For general protocol recommendations, please visit www.bio-rad-antibodies.com/protocols.

	Yes	No	Not Determined	Suggested Dilution
Flow Cytometry (1)	•			Neat

Where this product has not been tested for use in a particular technique this does not necessarily exclude its use in such procedures. Suggested working dilutions are given as a guide only. It is recommended that the user titrates the product for use in their own system using appropriate negative/positive controls.

(1) Membrane permeabilization is required for this application. The use of Leucoperm (Product Code <u>BUF09</u>) is recommended for this purpose.

Target Species	Dog			
Species Cross	Reacts with: Mink, H	Human		
Reactivity	Does not react with:	Mouse, Rat		
	reactivity is derived	ivity and working conditi from testing within our la ations from the originato	aboratories, peer-revi	ewed publications or
Product Form	Purified IgG conjuga	ated to R. Phycoerythrin	(RPE) - lyophilized	
Reconstitution	Reconstitute with 1r	ml distilled water		
Max Ex/Em	Fluorophore	Excitation Max (nm)	Emission Max (nm)	
	RPE 488nm laser	496	578	

Mouse anti Dog CD107b antibody, clone AC17 recognizes canine CD107b, otherwise known as lysosome-associated membrane protein 2 or LAMP-2. Immunofluorescence staining of MDCK cells with mouse anti dog CD107b, clone AC17 demonstrates staining patterns consistent with localization to lysozomes. This is supported by coincident staining of an exogenous lysozomal glycoprotein, avian LEP100 transfected into MDCK cells and detected using the anti LEP100 antibody, clone AC17 immunoprecipitates a protein of ~95 kDa in MDCK cells which, following Endo F digestion to remove N-linked oligosaccharides, yields a core protein product of 40 kDa, indicating the heavily glycosylated nature of CD107b. The molecular weight of canine CD107b is typical of many lysozome-associate membrane proteins. While most (97%) CD107b resides in the lysozomal environment in adherent MDCK cells in vitro, a small percentage is associated with the cell membrane (Nabi et al. 1991). CD107b has been shown to share high N-terminal amino acid sequence homology with human, mouse and rat CD107b (Nabi et al. 1993). Transfection of a mink type II lung epithelial cell line with beta1-6-N-acetylglucosaminyl transferase V demonstrates the formation of large lysozomal vacuoles, termed multilamellar bodies (MLBs), having a very distinct phenotype with expression of CD107 as indicated by immunofluorescent staining with clone AC17. These MLBs require lysozomal degradation via an autophagic pathway for their formation and may have implications for lysozomal storage diseases (Hariri et al. 2000). CD107b is involved in the lysosomal uptake of cytosolic proteins and the endocytic pathway.		
Preservative Stabilisers 1% Bovine Serum Albumin 5% Sucrose Immunogen MDCK (Madin-Darby Canine Kidney) cells RRID AB_10897185 Fusion Partners Spleen cells from immunised Balb/c mice were fused with cells of the NS1 myeloma cell line Mouse anti Dog CD107b antibody, clone AC17 recognizes canine CD107b, otherwise known as lysosome-associated membrane protein 2 or LAMP-2. Immunofluorescence staining of MDCK cells with mouse anti dog CD107b, clone AC17 demonstrates staining patterns consistent with localization to lysozomes. This is supported by coincident staini of an exogenous lysozomal glycoprotein, avian LEP100 transfected into MDCK cells an detected using the anti LEP100 antibody clone CV24 (Nabi et al.1991). Mouse anti Dog CD107b antibody, clone AC17 immunoprecipitates a protein of ~95 kDz in MDCK cells which, following Endo F digestion to remove N-linked oligosaccharides, yields a core protein product of 40 kDa, indicating the heavily glycosylated nature of CD107b. The molecular weight of canine CD107b is typical of many lysozome-associate membrane proteins. While most (97%) CD107b resides in the lysozomal environment in adherent MDCK cells in vitro, a small percentage is associated with the cell membrane (Nabi et al.1991). Storage

Prior to reconstitution store at +4°C.

After reconstitution store at +4°C.

DO NOT FREEZE. This product should be stored undiluted. This product is photosensitive and should be protected from light. Should this product contain a precipitate we recommend microcentrifugation before use.

Guarantee	12 months from date of despatch
