<b>Specificity</b>	<p><b>Mouse anti Human Factor P antibody, clone 062-27.8.1 (10-18)</b> recognizes human factor P, a 53 kDa glycosylated protein present in blood serum. Factor P binds to microbial surfaces and binds and stabilizes the complement component 3- and complement component 5-convertase enzyme complexes. C3b then acts as an opsonin or initiates the complement pathway again creating a positive feedback loop which acts only on the bacterial cell, leaving the host cells unharmed. Deficiency of factor P makes the host more susceptible to bacterial infections, particularly to <i>Neisseria</i> species and meningococcal infections.</p> <p>Mouse anti Human Factor P antibody, clone 10-18 is reported to inhibit the function of factor P. Removal of sodium azide is recommended prior to use in functional assays.</p>
<b>Histology Positive Control Tissue</b>	Kidney from post streptococcal glomerulonephritis patients
