<b>Specificity</b>	<p><b>Mouse anti Human Fibrinogen antibody, clone 40F11</b> recognizes human fibrinogen, a glycoprotein produced in the liver. Fibrinogen is a hexamer, consisting of two sets of three subunits (alpha, beta and gamma). Thrombin converts fibrinogen into fibrin, which is then cross-linked by factor XIII to form a blood clot.</p> <p>Mouse anti Human Fibrinogen antibody, clone 40F11 also recognizes fibrin degradation products (FDPs), substances that are left behind after a blood clot dissolves. This process, called fibrinolysis, is produced by the action of enzymes such as plasmin on fibrin. One FDP is D-dimer, levels of which can be used to diagnose deep vein thrombosis or pulmonary embolism. The fibrinolytic system is also closely linked to the control of inflammation.</p>
<b>Storage</b>	<p>This product is shipped at ambient temperature. It is recommended to aliquot and store at -20°C on receipt. When thawed, aliquot the sample as needed. Keep aliquots at 2-8°C for short term use (up to 4 weeks) and store the remaining aliquots at -20°C.</p> <p>Avoid repeated freezing and thawing as this may denature the antibody. Storage in frost-free freezers is not recommended.</p>
