

Datasheet: MCA2831

Description:	MOUSE ANTI SALMONELLA PARATYPHI A LPS GROUP A 0-2 ANTIGEN
Specificity:	SALMONELLA PARATYPHI A LPS GROUP A 0-2 ANTIGEN
Other names:	O-ANTIGEN
Format:	Purified
Product Type:	Monoclonal Antibody
Clone:	10B10G
Isotype:	IgG1
Quantity:	0.2 mg

Product Details

Applications

This product has been reported to work in the following applications. This information is derived from testing within our laboratories, peer-reviewed publications or personal communications from the originators. Please refer to references indicated for further information. For general protocol recommendations, please visit www.bio-rad-antibodies.com/protocols.

	Yes	No	Not Determined	Suggested Dilution
Flow Cytometry			▪	
Immunohistology - Frozen			▪	
Immunohistology - Paraffin			▪	
ELISA	▪			
Western Blotting			▪	
Immunofluorescence	▪			
Immunoblotting	▪			

Where this product has not been tested for use in a particular technique this does not necessarily exclude its use in such procedures. Suggested working dilutions are given as a guide only. It is recommended that the user titrates the product for use in their own system using the appropriate negative/positive controls.

Target Species	Bacterial
Product Form	Purified IgG - liquid
Preparation	Purified IgG prepared by affinity chromatography on Protein G from tissue culture supernatant
Buffer Solution	Phosphate buffered saline
Preservative Stabilisers	<0.1% Sodium Azide (NaN ₃)

Approx. Protein Concentrations	IgG concentration 1.0mg/ml
Immunogen	Heat inactivated cells of <i>Salmonella paratyphi A</i> .
RRID	AB_1125359
Fusion Partners	Spleen cells from immunised Balb/c mice were fused with cells of Sp2/0 the myeloma cells.
Specificity	<p>Mouse anti Salmonella paratyphi A LPS Group A 0-2 Antigen antibody, clone 10B10G recognizes the O antigen of <i>Salmonella enterica</i>, serovar paratyphi A (also known as <i>S. paratyphi</i>). The O antigen is a polysaccharide that extends from the core oligosaccharide, which itself is attached to lipid A. These three components together form the lipopolysaccharide (LPS), a major component of the outer membrane of Gram-negative bacteria. The LPS is an endotoxin and induces a strong immune response from the host. Its mutation or removal results in the death of the bacterial cell and as such is a prime target for antimicrobial drugs. The O antigen is the outermost component of the LPS and functions as a receptor for bacteriophages. It is also important in the immune response of the host. Considerable diversity is seen within <i>Salmonella</i> O antigens.</p> <p><i>Salmonella enterica</i>, serovar paratyphi A belongs to serogroup A of Salmonella and causes paratyphoid fever, which is similar to typhoid fever but more benign.</p> <p>Mouse anti Salmonella paratyphi A LPS Group A 0-2 Antigen antibody, clone 10B10G recognizes the 0-2 antigenic determinant of <i>Salmonella</i> serogroup A and does not cross-react with the LPS of serogroups B, D or E of <i>Salmonella</i> spp.</p>
Storage	<p>This product is shipped at ambient temperature. It is recommended to aliquot and store at -20°C on receipt. When thawed, aliquot the sample as needed. Keep aliquots at 2-8°C for short term use (up to 4 weeks) and store the remaining aliquots at -20°C.</p> <p>Avoid repeated freezing and thawing as this may denature the antibody. Storage in frost-free freezers is not recommended.</p>
Guarantee	12 months from date of despatch
