Datasheet: MCA2885

Description: MOUSE ANTI PROSTATE SPECIFIC MEMBRANE ANTIGEN

Specificity: PROSTATE SPECIFIC MEMBRANE ANTIGEN

Other names: GCP II

Format: Purified

Product Type: Monoclonal Antibody

Clone: GCP-04

Isotype: IgG1

Quantity: 0.1 mg

Product Details

RRID AB_2106316

Applications

This product has been reported to work in the following applications. This information is derived from testing within our laboratories, peer-reviewed publications or personal communications from the originators. Please refer to references indicated for further information. For general protocol recommendations, please visit www.bio-rad-antibodies.com/protocols.

Where this product has not been tested for use in a particular technique this does not necessarily exclude its use in such procedures. Suggested working dilutions are given as a guide only. It is recommended that the user titrates the product for use in their own system using appropriate negative/positive controls.

(1) This product requires antigen retrieval using heat treatment prior to staining of paraffin sections. Sodium citrate buffer pH 6.0 is recommended for this purpose.

Target Species

Human

Species Cross Reactivity

Reacts with: Rat, Pig

N.B. Antibody reactivity and working conditions may vary between species.

Product Form

Purified IgG - liquid

Preparation

Purified IgG prepared by affinity chromatography on Protein A

Buffer Solution

Phosphate buffered saline

Preservative Stabilisers

0.09% Sodium Azide (NaN₃)
Approx. Protein Concentrations

IgG concentration 1.0mg/ml

Immunogen

Recombinant fragment corresponding to amino acids 44-750 of human GCPII.

Synonyms

FOLH, NAALAD1, PSM, PSMA

Specificity

Mouse anti prostate specific Membrane Antigen antibody, clone GCP-04 recognises amino acids 100-104 of the extracellular domain of prostate specific membrane antigen (PSMA), otherwise known as GCPII (glutamate carboxypeptidase II), a 95-110 kDa type II transmembrane glycoprotein and member of the peptidase M28 family.

Nomenclature for GCPII is dependent upon tissue specificity. PSMA is assigned to GCPII of prostate origin which is up-regulated in prostate cancer and a reliable diagnostic marker. Folate hydrolase (FOLH1) describes GCPII in the intestine and is required for folate uptake, whilst NAALADase refers to GCPII expressed in the central nervous system, which acts to cleave N-acetylaspartylglutamate (NAAG) to release glutamate, implicated in pathological conditions including Alzheimer’s and Huntington’s disease.

Histology Positive Control Tissue

Human prostate, kidney or spinal cord.

References

Storage

Store at +4°C or at -20°C if preferred. Storage in frost-free freezers is not recommended. This product should be stored undiluted. Avoid repeated freezing and thawing as this may denature the antibody. Should this product contain a precipitate we recommend microcentrifugation before use.

Guarantee

18 months from date of despatch.
