

# Datasheet: MCA43PE BATCH NUMBER 0314

Description:	MOUSE ANTI RAT CD45:RPE		
Specificity:	CD45		
Other names:	LCA		
Format:	RPE		
Product Type:	Monoclonal Antibody		
Clone:	OX-1		
lsotype:	lgG1		
Quantity:	100 TESTS		

# **Product Details**

Applications	This product has been reported to work in the following applications. This information is derived from testing within our laboratories, peer-reviewed publications or personal communications from the originators. Please refer to references indicated for further information. For general protocol recommendations, please visit <u>www.bio-rad-antibodies.com/protocols</u> .					
		Yes No	Not Determined	Suggested Dilution		
	Flow Cytometry	•		Neat		
	Where this antibody has not been tested for use in a particular technique this does not necessarily exclude its use in such procedures. Suggested working dilutions are given as a guide only. It is recommended that the user titrates the antibody for use in their own system using appropriate negative/positive controls.					
Target Species	Rat					
Product Form	Purified IgG conjugated to R. Phycoerythrin (RPE) - Iyophilized					
Reconstitution	Reconstitute with 1 ml distilled water					
Max Ex/Em	Fluorophore	Excitation Max (nm)	Emission Max (nm)			
	RPE 488nm laser	496	578			
Buffer Solution	Phosphate buffered saline					
Preservative Stabilisers	<ul><li>0.09% Sodium Azide</li><li>1% Bovine Serum Albumin</li><li>5% Sucrose</li></ul>					
Immunogen	Rat thymocyte membra	ane glycoproteins.

RRID	AB_321412		
Fusion Partners	Spleen cells from immunised BALB/c mice were fused with cells of the NS1 mouse myeloma cell line.		
Specificity	Mouse anti Rat CD45 antibody, clone OX-1 recognizes CD45, also known as the leucocyte common antigen (LCA). The leucocyte common antigen consists of a family of heavily glycosylated membrane glycoproteins of molecular weight 180 – 240kDa. Antibodies recognising a common epitope on all of these isoforms are termed CD45, whilst those recognising only individual isoforms are termed CD45RA, CD45RO etc. OX-1 reacts with all forms of CD45 expressed by all haematopoietic cells, except erythrocytes.		
	CD45 isoforms play complex roles in T-cell and B-cell antigen receptor signal transduction.		
	This product is routinely tested in flow cytometry on rat splenocytes		
Flow Cytometry	Use 10ul of the suggested working dilution to label 10 <sup>6</sup> cells in 100ul.		
Flow Cytometry References	Use 10ul of the suggested working dilution to label 10 <sup>6</sup> cells in 100ul. 1.
