### Product Details

**RRID**
- AB_1101796

**Applications**
- This product has been reported to work in the following applications. This information is derived from testing within our laboratories, peer-reviewed publications or personal communications from the originators. Please refer to references indicated for further information. For general protocol recommendations, please visit [www.bio-rad-antibodies.com/protocols](http://www.bio-rad-antibodies.com/protocols).

Where this antibody has not been tested for use in a particular technique this does not necessarily exclude its use in such procedures. Suggested working dilutions are given as a guide only. It is recommended that the user titrates the antibody for use in their own system using appropriate negative/positive controls.

**Target Species**
- Human

**Species Cross Reactivity**
- Reacts with: Chimpanzee

**Product Form**
- Purified IgG conjugated to RPE-Cy5 - liquid

**Max Ex/Em**
- **Fluorophore**
  - RPE-Cy5
- **Excitation Max (nm)**
  - 496
- **Emission Max (nm)**
  - 667

**Buffer Solution**
- Phosphate buffered saline

**Preservative**
- 0.1% Sodium Azide (NaN₃)

**Stabilisers**
- Stabilizing agent

**Immunogen**
- Human infant thymocytes and lymphocytes from a patient with Sezary Syndrome.

**External Database Links**
- **UniProt**: P07766
- Related reagents

**Entrez Gene:**
Spleen cells from immunised BALB/c mice were fused with cells of the P3/NS1/1-Ag4-1 mouse myeloma cell line.

**Specificity**

Mouse anti Human CD3 antibody, clone UCHT1 recognizes the human T-cell surface glycoprotein CD3 epsilon chain, also known as T-cell surface antigen T3/Leu-4 epsilon chain or CD3ε. CD3ε is a 207 amino acid, ~21kDa single pass type 1 transmembrane protein containing a single Ig-like and a single ITAM domain. Mouse anti Human CD3 antibody, clone UCHT1 was originally described as only binding to CD3ε when complexed with either the CD3δ or CD3γ subunits, as indicated by co-transfection immunofluorescence studies on COS cells (Salmerón et al. 1991). Mouse anti Human CD3 antibody, clone UCHT1 binds to a region in the ectodomain of human CD3ε and has been shown to bind to a discontinuous epitope near an acidic region of CD3ε opposite the dimer interface; as shown by crystallographic studies of the CD3ε/δ dimer complexed with a single chain UCHT1 antibody fragment (Arnett et al. 2004).

CD3 is expressed by all T lymphocytes and is seen in all lymphoid organs including lymph nodes and spleen. It is involved in thymocyte differentiation (Brodeur et al. 2009). Deficiency of the CD3ε chain contributes to blocking T-cell development and presentation of a severe combined immunodeficiency phenotype (Fischer et al. 2005).

Mouse anti Human CD3 antibody, clone UCHT1 has been used successfully for the activation of human peripheral blood lymphocytes by cross linking and subsequently for CD3ε surface expression by flow cytometry (Hirsh and Cohen 2006).

**Flow Cytometry**

Use 10ul of the suggested working dilution to label 10^6 cells or cells or 100ul whole blood

Storage
Store at +4°C. DO NOT FREEZE. This product should be stored undiluted. Storage in frost free
freezers is not recommended. This product is photosensitive and should be protected from light. Avoid repeated freezing and thawing as this may denature the antibody. Should this product contain a precipitate we recommend microcentrifugation before use.

Guarantee
Guaranteed until date of expiry. Please see product label.
