

Datasheet: MCA508G BATCH NUMBER 166566

Description:	MOUSE ANTI HUMAN COMPLEMENT FACTOR H		
Specificity:	COMPLEMENT FACTOR H		
Other names:	H FACTOR 1		
Format:	Purified		
Product Type:	Monoclonal Antibody		
Clone:	OX-23		
Isotype:	lgG1		
Quantity:	0.2 mg		

Product Details

Applications	This product has been reported to work in the following applications. This information is derived from testing within our laboratories, peer-reviewed publications or personal communications from the originators. Please refer to references indicated for further

Preparation	Purified IgG prepared by affinity chromatography on Protein A from tissue culture supernatant				
Buffer Solution	Phosphate buffered saline				
Preservative Stabilisers	0.09% Sodium Azide				
Carrier Free	Yes				
Approx. Protein Concentrations	IgG concentration 1.0 mg/ml				
Immunogen	Human complement factor H.				
External Database Links	UniProt: <u>P08603</u> <u>Related reagents</u> Entrez Gene:				
	3075 CFH Related reagents				
Synonyms	HF, HF1, HF2				
RRID	AB_2080129				
Fusion Partners	Spleen cells from immunised Balb/c mice were fused with cells of the NS-O mouse myeloma cell line.				
Specificity	Mouse anti Human Complement Factor H antibody, clone OX-23 recognizes intact human serum complement protein factor H, also known as H factor 1. Complement factor H is a 1213 amino acid ~155 kDa secreted glycoprotein bearing multiple disulphide bonds and is involved in the deactivation of C3b and dissociation of C3 convertase in the alternative complement pathway. Mouse anti Human Complement Factor H antibody, clone OX-23 also recognizes a ~43-49 kDa truncated form of factor H present at low level (1-5ug/ml) in plasma and urine.				
	Mutations in the CFH gene can lead to the development of Complement Factor H deficiency (<u>CFHD</u>) which can be asymptomatic, present with recurrent bacterial infections or renal failure (<u>Ault <i>et al.</i> 1997</u>). Mutations can also lead to development of Basal laminar drusen (<u>BLD</u>), the deposition of extracellular deposits accumulating below the retinal pigment epithelium on Bruch membrane which can ultimately lead to vision loss (<u>Boon <i>et al.</i> 2008</u>). Additionally, mutations in the CFH gene can lead to increased susceptibility to Hemolytic uremic syndrome atypical 1 (<u>AHUS1</u>) or Macular degeneration, age-related, 4 (<u>ARMD4</u>).				
	Mouse anti Human Complement Factor H antibody, clone OX-23 has been used successfully for the determination of levels of bound murine factor H in a sandwich ELISA (Daniels-Treffandier <i>et al.</i> 2016).

Storage	This product is shipped at ambient temperature. It is recommended to aliquot and store at -20°C on receipt. When thawed, aliquot the sample as needed. Keep aliquots at 2-8°C for short term use (up to 4 weeks) and store the remaining aliquots at -20°C. Avoid repeated freezing and thawing as this may denature the antibody. Storage in frost-free freezers is not recommended.
Guarantee	12 months from date of despatch
Health And Safety Information	Material Safety Datasheet documentation #10040 available at: https://www.bio-rad-antibodies.com/SDS/MCA508G 10040
Regulatory	For research purposes only
