Datasheet: MCA5648GA

Description: MOUSE ANTI HUMAN GLUTAMATE DECARBOXYLASE 2 (N-TERMINAL)

Specificity: GLUTAMATE DECARBOXYLASE 2 (N-TERMINAL)

Other names: GAD65/GAD2

Format: Purified

Product Type: Monoclonal Antibody

Clone: N-GAD65

Isotype: IgG1

Quantity: 0.1 mg

RRID: AB_10922594

Applications

This product has been reported to work in the following applications. This information is derived from testing within our laboratories, peer-reviewed publications or personal communications from the originators. Please refer to references indicated for further information. For general protocol recommendations, please visit www.bio-rad-antibodies.com/protocols.

Where this product has not been tested for use in a particular technique this does not necessarily exclude its use in such procedures. Suggested working dilutions are given as a guide only. It is recommended that the user titrates the product for use in their own system using appropriate negative/positive controls.

Target Species: Human

Species Cross Reactivity: Reacts with: Rat, Monkey

N.B. Antibody reactivity and working conditions may vary between species.

Product Form: Purified IgG - liquid

Preparation: Purified IgG prepared by affinity chromatography on Protein G from tissue culture supernatant

Buffer Solution: Phosphate buffered saline

Preservative Stabilisers: 0.09% Sodium Azide (NaN₃)

Carrier Free: Yes
### Approx. Protein Concentrations

| IgG concentration 1.0mg/ml |

### Immunogen

Keyhole Limpet Haemocyanin (KLH) conjugated synthetic peptide sequence PGSGFWSFGSEDGSGDSEN corresponding to amino acids 4-22 within the N-terminal region of human GAD65.

### Synonyms

GAD65

### Fusion Partners

Spleen cells from immunised Balb/c mice were fused with cells of the SP2/0-Ag14 mouse myeloma cell line.

### Specificity

Mouse anti Human Glutamate Decarboxylase 2 (N-Terminal) antibody, clone N-GAD65 recognizes human glutamate decarboxylase 2, also known as 65 kDa glutamic acid decarboxylase, Glutamate decarboxylase 65 kDa isoform or GAD-65. Glutamate decarboxylase 2 is a 585 amino acid ~65 kDa lipid anchored membrane associated protein responsible for catalysis of γ-aminobutyric acid (GABA) production, the major inhibitory neurotransmitter in the central nervous system (Fenalti et al. 2007) and is expressed in the brain and pancreatic beta cells.

Glutamate decarboxylase 2 is the 65 kDa isoform of glutamate decarboxylase, encoded by the GAD2 gene and predominantly expressed by nerve termini, as opposed to the 67 kDa isoform (GAD67), predominantly found in the cell body, and encoded by the GAD1 gene. Autoantibodies to Glutamate decarboxylase 2 are detected in autoimmune diseases, including Graves disease (Kallmann et al. 1997), Stiff Man Syndrome (Raju et al. 2005) and are most prevalent in patients with Type I diabetes mellitus or those at high risk of developing Type I diabetes (Petersen et al. 1994). The N-Terminal region of GAD65 is essential for targeting the enzyme to GABA-containing secretory vesicles (Shi et al. 1994).

Mouse anti Human Glutamate Decarboxylase 2 (N-Terminal) antibody, clone N-GAD65 recognizes GAD65 but does not recognize GAD67 (Hampe et al. 2001).

### Histology Positive Control Tissue

Human brain

### References

### Storage

Store at +4°C or at -20°C if preferred.

Storage in frost-free freezers is not recommended.

This product should be stored undiluted. Avoid repeated freezing and thawing as this may denature the antibody. Should this product contain a precipitate we recommend microcentrifugation before use.

### Guarantee

18 months from date of despatch.

### Health And Safety
