

Datasheet: MCA5924

Description:	MOUSE ANTI HUMAN SOMATOSTATIN RECEPTOR 1
Specificity:	SOMATOSTATIN RECEPTOR 1
Format:	Purified
Product Type:	Monoclonal Antibody
Clone:	sstr1
Isotype:	IgG1
Quantity:	0.2 mg

Product Details

Applications This product has been reported to work in the following applications. This inform					ons. This information is	
	derived from testing withi	in our labo	oratories, p	eer-reviewed public	ations or personal	
	communications from the	e originato	rs. Please	refer to references i	ndicated for further	
	information. For general	protocol re	ecommend	lations, please visit v	www.bio-	
	rad-antibodies.com/proto	cols.				
		Yes	No	Not Determined	Suggested Dilution	
	Flow Cytometry					
	Immunohistology - Frozen			-		
	Immunohistology - Paraffin	•			1/100 - 1/250	
	ELISA			•		
	Immunoprecipitation			•		
	Western Blotting		•			
	Where this product has not been tested for use in a particular technique this does not					
	necessarily exclude its use in such procedures. Suggested working dilutions are given as a guide only. It is recommended that the user titrates the product for use in their own					
	system using appropriate negative/positive controls.					
Target Species	Human					
Product Form	Purified IgG - liquid					
Preparation	Purified IgG prepared by affinity chromatography on Protein A from tissue culture supernatant					
Buffer Solution	Phosphate buffered saline					
Preservative Stabilisers	0.09% Sodium Azide (Na	aN ₃)				
Carrier Free	Yes					

Approx. Protein Concentrations	IgG concentration 1mg/ml			
Immunogen	Synthetic peptide, sequence CKSRAYSVEDFQPENLE

Specificity	Mouse anti Human Somatostatin receptor 1, clone sstr1 recognizes the type I somatostatin receptor also known as SRIF-2. The human somatostatin receptor type 1 is a 391 amino acid, ~50 kDa multi pass transmembrane glycoprotein belonging to the G-protein coupled receptor 1 family.			
	Somatostatin (SST) is a peptide hormone with wide ranging inhibitory effects on hormone secretion and cell proliferation. It is produced as a large preproSST precursor molecule that is cleaved to yield one of two active forms of the peptide: a 14 amino acid peptide (SST-14), or a 28 amino acid peptide (SST-28). The inhibitory effects of SST on hormone release and cell growth have made them candidates for the treatment of cancer and neuroendocrine disorders. Natural SSTs have very short half-lives, which led to the development of more stable synthetic derivatives, such as <u>octreotide</u> and <u>lanreotide</u> , both in common clinical use.			
	The effects of SST are mediated via five distinct SST receptors (SSTRs). The receptors have similar affinities for natural SST-14 and SST-28, but there are marked differences in affinities towards the synthetic analogues. Somatostatin receptors are expressed by various tissues, notably neuronal, endocrine, gastrointestinal and immune cells, as well as certain tumours, with tumours often expressing more than one subtype in different combinations.			
	Clone sstr1 specifically recognises SSTR type 1, but none of the other SSTR subtypes. Bio-Rad also has antibodies to other <u>somatostatin receptors</u> available
