**Specificity** **Mouse anti Pig CD3, clone PPT3** recognizes the porcine homologue of human CD3 $\epsilon$ , a 24 kDa single pass type I membrane protein expressed by T-lymphocytes. Clone PPT3, also known under the clone designation FY1H2, was clustered at the second international swine CD workshop and found to specifically recognise an epitope on the porcine CD3 $\epsilon$  designated as CD3c ([Pescovitz, M.D., et al. 1998](#)).

CD3 is a multimeric protein complex composed of four distinct polypeptide chains ( $\epsilon$ ,  $\gamma$ ,  $\delta$ ,  $\zeta$ ) that assemble and function as three pairs of dimers ( $\epsilon\gamma$ ,  $\epsilon\delta$ ,  $\zeta\zeta$ ). The CD3 complex serves as a T cell co-receptor that associates non-covalently with the T cell receptor (TCR) ([Guy, C.S & Vignali, D.G. 2009](#)). CD3 is a defining feature of cells belonging to the T cell lineage, antibodies recognising pig CD3 therefore provide useful markers of porcine T cells.

Clone PPT3 has been demonstrated to recognise an epitope that is expressed both intracellularly and extracellularly, additionally clone PPT3 has been demonstrated to activate  $\alpha/\beta$  T-cells ([Kirkham P.A., et al. 1996](#)).

Clone PPT3 was tested on PBL from a range of other mammalian species and found to be negative suggesting that the epitope recognised by this clone is specific to porcine ([Yang, H. et al. 1996](#)).

**Flow Cytometry** Use 5 $\mu$ l of the suggested working dilution to label 10<sup>6</sup> cells in 100 $\mu$ l. Best practices suggest a 5 minutes centrifugation at 6,000g prior to sample application.
