<b>Specificity</b>	<p><b>Mouse anti Pig CD1 antibody, clone 76-7-4</b> recognizes a porcine homologue of the human CD1 cell surface receptor. CD1 is a member of the immunoglobulin superfamily. While it is structurally similar to the MHC class I receptor CD1 differs functionally by presenting lipid antigens to T cells (<a href="#">Germain &amp; Margulies, 1993</a>).</p> <p>To date, five classes of the CD1 genes have been identified across different mammalian species, namely CD1A, CD1B, CD1C, CD1D, and CD1E (<a href="#">Brigl &amp; Brenner, 2004</a>). In swine various tissues express CD1C even though its gene has been reported to carry a loss-of-function mutation (<a href="#">Eguchi-Ogawa et al. 2007</a>). CD1 is predominantly found on dendritic cells, macrophages, monocytes, and thymocytes (<a href="#">Chun et al. 1999</a>).</p>
<b>Flow Cytometry</b>	Use 10ul of the suggested working dilution to label 1x10 <sup>6</sup> cells in 100ul
