<b>Specificity</b>	<p><b>Mouse anti Human TCR gamma/delta, clone B1</b> recognizes TCR gamma/delta, a T cell receptor expressed by a small subset of T cells. In healthy individuals these TCR gamma/delta cells account for 1-10% of peripheral blood lymphocytes (<a href="#">Gomes et al. 2010</a>).</p> <p>TCR gamma/delta is composed of disulfide bonded gamma and delta chains that can bind directly to pathogen derived glycoprotein's or non-classical MHC molecules on tumor cells (<a href="#">Kuhns et al. 2006</a>).</p> <p>This clone B1 has been used as a blocking antibody in experiments to examine the recognition of tumor cells by TCR gamma/delta cells. These experiments supported the hypothesis that innate NK receptors on gamma/delta cells can also bind and recognize tumor cells (<a href="#">Correia et al. 2011</a>).</p>
