

Datasheet: MCA6164GA

Description:	MOUSE ANTI HUMAN ACTIVATED C1s
Specificity:	C1s
Format:	Purified
Product Type:	Monoclonal Antibody
Clone:	M241
Isotype:	IgG2a
Quantity:	0.1 mg

Product Details

Applications

This product has been reported to work in the following applications. This information is derived from testing within our laboratories, peer-reviewed publications or personal communications from the originators. Please refer to references indicated for further information. For general protocol recommendations, please visit www.bio-rad-antibodies.com/protocols.

	Yes	No	Not Determined	Suggested Dilution
Flow Cytometry	▪			
Immunohistology - Frozen	▪			
Immunohistology - Paraffin	▪			
ELISA	▪			
Immunoprecipitation	▪			
Western Blotting	▪			

Where this product has not been tested for use in a particular technique this does not necessarily exclude its use in such procedures. Suggested working dilutions are given as a guide only. It is recommended that the user titrates the product for use in their own system using appropriate negative/positive controls.

Target Species	Human
Product Form	Purified IgG - liquid
Preparation	Purified IgG prepared by affinity chromatography on Protein G from tissue culture supernatant
Buffer Solution	Phosphate buffered saline
Preservative Stabilisers	0.09% Sodium Azide (NaN ₃)
Approx. Protein Concentrations	IgG concentration 0.1 mg/ml

Specificity

Mouse anti Human Activated C1s antibody, clone M241, recognizes human C1s, a subcomponent of complement component 1 (C1). The epitope recognized by this antibody is domain IV and/or V of the gamma-domain of activated C1s and bind specifically at the active center of C1s.

C1 is a large inactive plasma complex containing one subunit of C1q, 2 subunits of C1r and 2 C1s subunits, which are non-covalently bound together. C1 is the first responder in the classical activation pathway in the complement cascade ([Noris & Remuzzi 2013](#)). The classical pathway is initiated when the C1q subunit comes into close proximity of the Fc regions of immunoglobulin's that have bound close together to an antigen fixed on the surface of a pathogen. This binding by C1q results in the auto-activation of C1r which subsequently releases active C1s units. The newly released active C1s cleaves C4 and C2 creating C4b and C2a which then generate C3 convertase to continue the cascade ([Janeway et al. 2001](#)).

Storage

This product is shipped at ambient temperature. It is recommended to aliquot and store at -20°C on receipt. When thawed, aliquot the sample as needed. Keep aliquots at 2-8°C for short term use (up to 4 weeks) and store the remaining aliquots at -20°C.

Avoid repeated freezing and thawing as this may denature the antibody. Storage in frost-free freezers is not recommended.

Guarantee

12 months from date of despatch
