

Datasheet: MCA6237B

Description:	MOUSE ANTI HUMAN IFN BETA:Biotin
Specificity:	IFN BETA
Other names:	Fibroblast interferon
Format:	Biotin
Product Type:	Monoclonal Antibody
Clone:	C06-4F6
lsotype:	lgG2a
Quantity:	0.1 mg

Product Details

Applications	This product has been reported to work in the following applications. This information is derived from testing within our laboratories, peer-reviewed publications or personal communications from the originators. Please refer to references indicated for further information. For general protocol recommendations, please visit <u>www.bio-rad-antibodies.com/protocols</u> .								
		Yes	No	Not Determined	Suggested Dilution				
	ELISA				1.0 ug/ml				
	Where this product has not been tested for use in a particular technique this does not necessarily exclude its use in such procedures. Suggested working dilutions are given as a guide only. It is recommended that the user titrates the product for use in their own system using appropriate negative/positive controls.								
Target Species	Human								
Product Form	Purified IgG conjugated to	o Biotin - I	iquid						
Preparation	Purified IgG prepared by supernatant	aphy on Protein G from	m tissue culture						
Buffer Solution	Phosphate buffered salin	e							
Preservative Stabilisers	0.09% Sodium Azide (Na 1% Bovine Serum Album	0,							
Approx. Protein Concentrations	IgG concentration 0.1 mg	j/ml							
Immunogen	E. coli derived recombina	ant human	full length	n IFN beta (Met22-Asi	n187)

Synonyms	IFB, IFNB					
Fusion Partners	Cell fusion between immunized BALB/c mouse spleen cells and mouse myeloma SP2/0					
Specificity	Mouse anti Human IFN beta antibody, clone C06-4F6, recognizes interferon beta (IFN beta) also known as fibroblast interferon, a type I interferon. It is constitutively expressed, but is synthesized at a higher level upon infection (<u>Takaoka & Taniguchi 2003</u>). IFN beta plays many roles within inflammation including limiting the immune response during inflammation through induction of IL-10 and can inhibit the inflammasome and IL-1 beta. It can also play a role in the reprogramming of macrophages to an inflammatory and pro-resolving phenotype (<u>Satyanarayanan <i>et al.</i> 2019</u>). These responses are mediated through its interaction with the IFN alpha/beta receptor with subsequent downstream activation of STAT1, 2 or 3 (<u>Takaoka & Taniguchi 2003</u>).					
	The biotinylated Mouse anti Human IFN beta antibody, clone C06-4F6 (MCA6237B) can be used as a detection antibody in a sandwich ELISA with the purified Mouse anti Human IFN beta antibody, clone F03-2G4 (<u>MCA6236GA</u>) as the capture antibody.					
Storage	This product is shipped at ambient temperature. It is recommended to aliquot and store at -20°C on receipt. When thawed, aliquot the sample as needed. Keep aliquots at 2-8°C for short term use (up to 4 weeks) and store the remaining aliquots at -20°C.					
	Avoid repeated freezing and thawing as this may denature the antibody. Storage in frost-free freezers is not recommended.					
Guarantee	12 months from date of despatch					
Health And Safety Information	Material Safety Datasheet documentation #10041 available at: https://www.bio-rad-antibodies.com/SDS/MCA6237B 10041					
Regulatory	For research purposes only
