<b>Specificity</b>	<p><b>Mouse anti Human interleukin-18BP antibody, clone B01-3E12</b>, recognizes interleukin-18-binding protein (IL-18BP), also known as tadekinig-alpha. IL-18BP is a secreted immunoregulatory binding protein which binds to and inhibits the cytokine activity of mature IL-18 with high affinity. IL-18 plays a role in host defense, inflammation, tissue repair, and regeneration (<a href="#">Mühl &amp; Bachmann 2019</a>).</p> <p>IL-18BP is constitutively expressed in the spleen, PBMCs, monocytes and umbilical vein endothelial cells (<a href="#">Mühl &amp; Bachmann 2019</a>, <a href="#">Corbaz et al. 2002</a>). It is detectable in the serum of healthy humans at a 20 fold molar excess compared to IL-18, with subjects showing levels of 2,000 – 4,000 pg/ml of IL-18BP (<a href="#">Kaplanski et al. 2018</a>). IL-18BP is upregulated in response to inflammation as part of the inflammation resolution process. Additionally, it can be upregulated during various cancers and IL-18BP levels are also affected by viral infections such as dengue and hepatitis C (<a href="#">Mühl &amp; Bachmann 2019</a>).</p> <p>The purified Mouse anti Human interleukin-18BP antibody, clone B01-3E12 (MCA6244GA) can be used as a capture antibody in a sandwich ELISA with the biotinylated Mouse anti Human interleukin-18BP antibody, clone A07-5D2 (<a href="#">MCA6245B</a>) as the detection antibody.</p>
