Datasheet: MCA6258GA BATCH NUMBER 100005530

Description:	MOUSE ANTI HUMAN MMP-3
Specificity:	MMP-3
Other names:	Stromelysin-1
Format:	Purified
Product Type:	Monoclonal Antibody
Clone:	108-9G7
Isotype:	lgG1
Quantity:	0.1 mg

Product Details

Applications	This product has been reported to work in the following applications. This information is derived from testing within our laboratories, peer-reviewed publications or personal communications from the originators. Please refer to references indicated for further information. For general protocol recommendations, please visit <u>www.bio-rad-antibodies.com/protocols</u> .					
		Yes	No	Not Determined	Suggested Dilution	
	ELISA	-			1.0 ug/ml

Target Species	Human					
Product Form	Purified IgG - liquid					
Preparation	Purified IgG prepared by affinity chromatography on Protein G from tissue culture supernatant					
Buffer Solution	Phosphate buffered salin	ie				
Preservative Stabilisers	0.09% Sodium Azide (Na	aN ₃)				
Carrier Free	Yes					
Approx. Protein Concentrations	IgG concentration 1.0 m	g/ml				

External Databases UniProt: P005254 Related reagents Synonyms STMY1 Fusion Partners Cell fusion between immunized BALB/c mouse spleen cells and mouse myeloma SP2/0 Spocificity Mouse anti Human MMP-3 antibody, clone 108-9G7, recognizes matrix metalloproteinase-3 (MMP-3) also known as stromelysin-1 (SL-1) and transin-1.1 MMP-3 is a member of the metzincins superfamily of proteases and is produced by various cells and tissues including the endothelium, vascular smooth muscle cells intima and platelets (Cul et al. 2017). MMP-3 is largely expressed by connective and vascular tissues and cells due to its roles in extracellular matrix remodeling. It is synthesized as a pre-proenzyme before being processed to remove the signal peptide forming the 57 kDa pro-MMP-3. This is then further cleaved by proteolytic enzymes to create the 45 kDa acitive form. Like other MMP's, MMP-3 plays a major role in tissue remodeling through the promotion of extracellular matrix (ECM) protein tumover. Specifically MMP-3 degrades the collagen proteins, type II, IV, Xa swell as the proteoglycans elastin fibronectin and laminin (Cul ef al. 2017). Through the degradation of these ECM components, growth factors and adhesion molecules, MMP-3 is implicated in synaptic plasticity through enzymatic modification of ECM constituents (Lech et al. 2019). Storage Storage in frost-free freezers is not recommended. This product should be stored undiluted. Avoid repeated freezing and thawing as this may denature the antibody, is no asandwich ELISA with the biotinylated Mouse anti Human MMP-3 antibody. Should this product contain a precipitate we recommend microcentrifugation before use.
