

Datasheet: TZA0162GA

Description:	MOUSE ANTI HUMAN CD40
Specificity:	CD40
Other names:	TNFRSF5
Format:	Purified
Product Type:	Monoclonal Antibody
Clone:	rA38B38-06/3H2
Isotype:	IgG1
Quantity:	0.1 mg

Product Details

Applications

This product has been reported to work in the following applications. This information is derived from testing within our laboratories, peer-reviewed publications or personal communications from the originators. Please refer to references indicated for further information. For general protocol recommendations, please visit www.bio-rad-antibodies.com/protocols.

	Yes	No	Not Determined	Suggested Dilution
Flow Cytometry	■			

Where this product has not been tested for use in a particular technique this does not necessarily exclude its use in such procedures. Suggested working dilutions are given as a guide only. It is recommended that the user titrates the product for use in their own system using appropriate negative/positive controls.

Target Species	Human
Product Form	Purified recombinant IgG containing a SpyTag at the C-terminus of the antibody heavy chain – liquid
Preparation	Purified IgG prepared by affinity chromatography on Protein A from tissue culture supernatant
Source	CHO cells
Buffer Solution	Phosphate buffered saline
Preservative Stabilisers	0.09% Sodium Azide (NaN ₃)
Approx. Protein Concentrations	IgG concentration 1.0 mg/ml

Immunogen Recombinant CD40 Glu21-Arg193 expressed by mammalian cells

Specificity

Mouse anti Human CD40 antibody, clone rA38B38-06/3H2, is a recombinant monoclonal antibody that recognizes CD40, also known as Bp50 or Tumor necrosis factor receptor superfamily member 5.

CD40 is a type 1 transmembrane protein belonging to the Tumor Necrosis Factor Receptor (TNFR) superfamily. It is expressed on a variety of immune cells, including B lymphocytes, dendritic cells (DCs) and monocytes. The ligand for CD40 (CD154) is predominantly expressed on the surface of activated T cells. Ligand binding to CD40 activates a range of downstream signaling pathways including the canonical and non-canonical NF- κ B, PI3 kinase and MAP kinase pathways. On DCs, CD40 engagement by CD40 ligand expressing CD4⁺ T cells stimulates the production of proinflammatory cytokines and increases the expression of co-stimulatory molecules such as CD80. DCs are licensed to present exogenous molecules to CD8⁺ T cells, resulting in their activation. On B cells, CD40 engagement results in B cell activation, proliferation and differentiation.

CD40 can be used as a surface marker for B cells. It is a potential therapeutic target for treatment of cancer.

Flow Cytometry

Use 5 μ l of the suggested working dilution to label 0.5x10⁶ cells in 100 μ l. Best practices suggest a 5 min centrifugation at 6,000g prior to sample application.

Storage

This product is shipped at ambient temperature. It is recommended to aliquot and store at -20°C on receipt. When thawed, aliquot the sample as needed. Keep aliquots at 2-8°C for short term use (up to 4 weeks) and store the remaining aliquots at -20°C.

Avoid repeated freezing and thawing as this may denature the antibody. Storage in frost-free freezers is not recommended.

Guarantee

12 months from date of despatch

Acknowledgements

This product and/or its use is covered by claims of U.S. patents, and/or pending U.S. and non-U.S. patent applications owned by or under license to Bio-Rad Laboratories, Inc. See bio-rad.com/en-us/trademarks for details.
