<b>Specificity</b>	<p><b>Mouse anti Human hnRNP F antibody</b> recognizes heterogeneous nuclear ribonucleoprotein F (hnRNP F), also known as nucleolin-like protein mcs94-1.</p> <p>HnRNP F belongs to the subfamily of ubiquitously expressed heterogeneous nuclear ribonucleoproteins (hnRNPs). The hnRNPs are RNA binding proteins that complex with heterogeneous nuclear RNA (hnRNA). These proteins are associated with pre-mRNAs in the nucleus and regulate alternative splicing, polyadenylation, and other aspects of mRNA metabolism and transport. While all of the hnRNPs are present in the nucleus, some seem to shuttle between the nucleus and the cytoplasm. The hnRNP proteins have distinct nucleic acid binding properties. Heterogeneous nuclear ribonucleoprotein F has three repeats of quasi-RRM domains that bind to RNAs which have guanosine-rich sequences. This protein is very similar to the family member hnRPH. Multiple alternatively spliced variants, encoding the same protein, have been identified (provided by RefSeq, Jul 2008).</p> <p>Mouse anti Human hnRNP F antibody detects a band of 46 kDa. The antibody has been extensively validated for western blotting using whole cell lysates.</p>
<b>Western Blotting</b>	Anti hnRNP F detects a band of approximately 46 kDa in Jurkat cell lysates.
