Synonyms	PPPM1A
Specificity	<p>Mouse anti Human PPM1A antibody recognizes protein phosphatase 1A, also known as protein phosphatase 1A magnesium-dependent, alpha isoform.</p> <p>Protein phosphatase 1A, encoded by the PPM1A gene, is a member of the PP2C family of Ser/Thr protein phosphatases. PP2C family members are known to be negative regulators of cell stress response pathways. This phosphatase dephosphorylates, and negatively regulates the activities of, MAP kinases and MAP kinase kinases. It has been shown to inhibit the activation of p38 and JNK kinase cascades induced by environmental stresses. This phosphatase can also dephosphorylate cyclin-dependent kinases, and thus may be involved in cell cycle control. Overexpression of this phosphatase is reported to activate the expression of the tumor suppressor gene TP53/p53, which leads to G2/M cell cycle arrest and apoptosis. Three alternatively spliced transcript variants encoding distinct isoforms have been described (provided by RefSeq, Jul 2008).</p> <p>Mouse anti Human PPM1A antibody detects a band of 42 kDa. The antibody has been extensively validated for western blotting using whole cell lysates.</p>
Western Blotting	Anti PPM1A detects a band of approximately 42 kDa in Jurkat cell lysates.
