<b>Specificity</b>	<p><b>Mouse anti Human casein kinase 1 epsilon antibody</b> recognizes the casein kinase I isoform epsilon, also known as CKI-epsilon, CKIε and casein kinase I isoform epsilon.</p> <p>Encoded by the CSNK1E gene, casein kinase 1 epsilon is a serine/threonine protein kinase and a member of the casein kinase I protein family, whose members have been implicated in the control of cytoplasmic and nuclear processes, including DNA replication and repair. The encoded protein is found in the cytoplasm as a monomer and can phosphorylate a variety of proteins, including itself. This protein has been shown to phosphorylate period, a circadian rhythm protein. Two transcript variants encoding the same protein have been found for CSNK1E (provided by RefSeq, Jul 2008).</p> <p>Mouse anti Human casein kinase I isoform epsilon antibody detects a band of 43 kDa. The antibody has been extensively validated for western blotting using whole cell lysates.</p>
<b>Western Blotting</b>	Anti casein kinase 1 epsilon detects a band of approximately 43 kDa in HEK293 cell lysates.
