Synonyms	BM28, CCNL1, CDCL1, KIAA0030
Specificity	<p>Mouse anti Human MCM2 antibody recognizes the DNA replication licensing factor MCM2, also known as DNA replication licensing factor MCM2, MCM2 minichromosome maintenance deficient 2, mitotin, cell division cycle-like 1, cyclin-like 1, minichromosome maintenance deficient 2 (mitotin), minichromosome maintenance protein 2 homolog and nuclear protein BM28.</p> <p>The protein encoded by MCM2 gene is one of the highly conserved mini-chromosome maintenance proteins (MCM) that are involved in the initiation of eukaryotic genome replication. The hexameric protein complex formed by MCM proteins is a key component of the pre-replication complex (pre_RC) and may be involved in the formation of replication forks and in the recruitment of other DNA replication related proteins. This protein forms a complex with MCM4, 6, and 7, and has been shown to regulate the helicase activity of the complex. This protein is phosphorylated, and thus regulated by, protein kinases CDC2 and CDC7. Multiple alternatively spliced transcript variants have been found, but the full-length nature of some variants has not been defined (provided by RefSeq, Oct 2012).</p> <p>Mouse anti Human MCM2 antibody detects a band of 125 kDa. The antibody has been extensively validated for western blotting using whole cell lysates.</p>
Western Blotting	Anti MCM2 detects a band of approximately 125 kDa in Jurkat cell lysates
