Specificity

Mouse anti Human CD171 antibody, clone OTI2G9 recognizes the CD171 antigen, also known as neural cell adhesion molecule L1, antigen identified by monoclonal antibody R1 and neural cell adhesion molecule L1.

Encoded by L1CAM gene, CD171 is an axonal glycoprotein belonging to the immunoglobulin supergene family. The ectodomain, consisting of several immunoglobulin-like domains and fibronectin-like repeats (type III), is linked via a single transmembrane sequence to a conserved cytoplasmic domain. This cell adhesion molecule plays an important role in nervous system development, including neuronal migration and differentiation. Mutations in the gene cause X-linked neurological syndromes known as CRASH (corpus callosum hypoplasia, retardation, aphasia, spastic paraplegia and hydrocephalus). Alternative splicing of L1CAM results in multiple transcript variants, some of which include an alternate exon that is considered to be specific to neurons (provided by RefSeq, May 2013).

Mouse anti Human CD171 antibody, clone OTI2G9 detects a band of 220-240 kDa. The antibody has been extensively validated for western blotting using whole cell lysates.

Western Blotting

Anti CD171 detects a band of approximately 220-240 kDa in HeLa cell lysates
