<b>Specificity</b>	<p><b>Mouse anti Human PSMA5 antibody</b> recognizes the proteasome subunit alpha type-5, also known as macropain subunit zeta, macropain zeta chain, multicatalytic endopeptidase complex zeta chain, proteasome alpha 5 subunit, proteasome component 5, proteasome subunit alpha type-5, proteasome subunit zeta and proteasome zeta chain.</p> <p>The proteasome is a multicatalytic proteinase complex with a highly ordered ring-shaped 20S core structure. The core structure is composed of 4 rings of 28 non-identical subunits. Two rings are composed of 7 alpha subunits and 2 rings are composed of 7 beta subunits. Proteasomes are distributed throughout eukaryotic cells at a high concentration and cleave peptides in an ATP/ubiquitin-dependent process in a non-lysosomal pathway. An essential function of a modified proteasome, the immunoproteasome, is the processing of class I MHC peptides. Encoded by the PSMA5 gene, proteasome subunit alpha type-5 is a member of the peptidase T1A family, that is a 20S core alpha subunit. Multiple alternatively spliced transcript variants encoding two distinct isoforms have been found for PSMA5 (provided by RefSeq, Dec 2010).</p> <p>Mouse anti Human PSMA5 antibody detects a band of 26 kDa. The antibody has been extensively validated for western blotting using whole cell lysates.</p>
<b>Western Blotting</b>	Anti PSMA5 detects a band of approximately 26 kDa in K562 cell lysates
