Synonyms	SUG1
Specificity	<p>Mouse anti Human PSMC5 antibody recognizes the 26S protease regulatory subunit 8, also known as 26S protease regulatory subunit 8, 26S proteasome AAA-ATPase subunit RPT6, MSUG1 protein, Tat-binding protein homolog 10, proteasome 26S ATPase subunit 5, proteasome 26S subunit ATPase 5, proteasome subunit p45, thyroid hormone receptor-interacting protein 1, thyroid receptor interactor 1.</p> <p>The 26S proteasome is a multicatalytic proteinase complex with a highly ordered structure composed of 2 complexes, a 20S core and a 19S regulator. The 20S core is composed of 4 rings of 28 non-identical subunits; 2 rings are composed of 7 alpha subunits and 2 rings are composed of 7 beta subunits. The 19S regulator is composed of a base, which contains 6 ATPase subunits and 2 non-ATPase subunits, and a lid, which contains up to 10 non-ATPase subunits. Proteasomes are distributed throughout eukaryotic cells at a high concentration and cleave peptides in an ATP/ubiquitin-dependent process in a non-lysosomal pathway. An essential function of a modified proteasome, the immunoproteasome, is the processing of class I MHC peptides. PSMC5 gene encodes one of the ATPase subunits, a member of the triple-A family of ATPases which have a chaperone-like activity. In addition to participation in proteasome functions, this subunit may participate in transcriptional regulation since it has been shown to interact with the thyroid hormone receptor and retinoid X receptor-alpha. Two transcript variants encoding different isoforms have been found for PSMC5 (provided by RefSeq, Nov 2010).</p> <p>Mouse anti Human PSMC5 detects a band of 46 kDa. The antibody has been extensively validated for western blotting using whole cell lysates.</p>
Western Blotting	Anti PSMC5 detects a band of approximately 46 kDa in HEK293 cell lysates.
