| <b>Specificity</b>                   | <p><b>Mouse anti Human tubulin Beta 3 antibody</b> recognizes tubulin beta 3, also known as TUBB3, class III beta-tubulin and tubulin beta-III.</p> <p>The TUBB3 gene encodes a class III member of the beta tubulin protein family. Beta tubulins are one of two core protein families (alpha and beta tubulins) that heterodimerize and assemble to form microtubules. This protein is primarily expressed in neurons and may be involved in neurogenesis and axon guidance and maintenance. Mutations in TUBB3 are the cause of congenital fibrosis of the extra-ocular muscles type 3. Alternate splicing results in multiple transcript variants. A pseudogene of TUBB3 is found on chromosome 6 (provided by RefSeq, Oct 2010).</p> <p>Mouse anti Human tubulin beta 3 antibody detects a band of 55 kDa. The antibody has been extensively validated for western blotting using whole cell lysates.</p> |
| <b>Western Blotting</b>              | Anti tubulin beta 3 detects a band of approximately 55 kDa in mouse and human brain tissue   |
